1. About This Manual

**WARNING**
Indicates a hazard that may cause personal injury or death.

**CAUTION**
Indicates a hazard that may damage the equipment or installation.

**NOTE**
Provides helpful information.

1.1 Disclaimer

The examples and diagrams in this manual are included solely for illustrative purposes.

The information contained in this manual is subject to change at any time and without prior notice. In no event will responsibility or liability be accepted for direct, indirect or consequential damages resulting from the use or application of this equipment.
2. Caution Statements

Caution Statements cannot cover every potential cause of equipment damage but can highlight common causes of damage. It is the installer's responsibility to read and understand all instructions in this manual prior to installing, operating or maintaining the equipment, to follow good electrical practice including applying appropriate personal protective equipment and to seek advice before operating this equipment in a manner other than as described in this manual.

NOTE
The EMX4i is not user serviceable. The unit should only be serviced by authorised service personnel. Unauthorised tampering with the unit will void the product warranty.

FOR YOUR SAFETY
- The STOP function of the soft starter does not isolate dangerous voltages from the output of the starter. The soft starter must be disconnected by an approved electrical isolation device before accessing electrical connections.
- Soft starter protection features apply to motor protection only. It is the user's responsibility to ensure safety of personnel operating machinery.
- The soft starter is a component designed for integration within an electrical system; it is therefore the responsibility of the system designer/user to ensure the system is safe and designed to comply with relevant local safety standards.

2.1 Electrical shock risk

WARNING – ELECTRICAL SHOCK RISK
- The voltages present in the following locations can cause severe electric shock and may be lethal:
  - AC supply cables and connections
  - Output cables and connections
  - Many internal parts of the starter

SHORT CIRCUIT
- The EMX4i is not short circuit proof. After severe overload or short circuit, the operation of the EMX4i should be fully tested by an authorised service agent.

GROUNDING AND BRANCH CIRCUIT PROTECTION
- It is the responsibility of the user or person installing the EMX4i to provide proper grounding and branch circuit protection according to local electrical safety codes.
2.2 Unexpected Operation

**WARNING – ACCIDENTAL STARTS**
In some installations, accidental starts may pose an increased risk to safety of personnel or damage to the machines being driven. In such cases, it is recommended that the power supply to the soft starter is fitted with an isolating switch and a circuit-breaking device (e.g., power contactor) controllable through an external safety system (e.g., emergency stop, fault detector).

**WARNING – STARTER MAY START OR STOP UNEXPECTEDLY**
The EMX4i will respond to control commands from various sources, and could start or stop unexpectedly. Always disconnect the soft starter from mains voltage before accessing the starter or load.

**WARNING – DISCONNECT MAINS BEFORE ACCESSING STARTER OR LOAD**
The soft starter has built-in protections which can trip the starter in the event of faults and thus stop the motor. Voltage fluctuations, power cuts and motor jams may also cause the motor to trip.

The motor could restart after the causes of shutdown are rectified, which may be dangerous for personnel. Always disconnect the soft starter from mains voltage before accessing the starter or load.

**CAUTION – MECHANICAL DAMAGE FROM UNEXPECTED RESTART**
The motor could restart after the causes of shutdown are rectified, which may be dangerous for certain machines or installations. In such cases, it is essential that appropriate arrangements are made against restarting after unscheduled stops of the motor.
2.3 Avertissements à l'attention des clients canadiens

AVERTISSEMENT
L'icône AVERTISSEMENT ci-contre signale les informations concernant des risques pouvant entraîner des blessures graves, voire mortelles. Pour votre sécurité, veuillez consulter les avertissements sur cette page ou demander une copie du présent manuel en français auprès de votre distributeur local.

AVERTISSEMENT – RISQUE DE CHOC ÉLECTRIQUE
Les zones suivantes sont soumises à des tensions pouvant provoquer des risques de chocs électriques graves, voire mortels :
- Raccordement et câbles d'alimentation AC
- Câbles et raccordements de sortie
- De nombreuses pièces internes du démarreur

PAR SÉCURITÉ
- La fonction STOP du démarreur progressif n'isole pas des tensions dangereuses de la sortie du démarreur. Le démarreur progressif doit être déconnecté par un dispositif d’isolement électrique approprié avant d'accéder aux connexions électriques.
- Les fonctions de protection du démarreur progressif ne concernent que la protection du moteur. Il relève de la responsabilité de l'utilisateur d'assurer la sécurité des personnes travaillant sur les machines.
- Le démarreur progressif est un appareil conçu pour s'intégrer dans un système électrique ; il relève donc de la responsabilité du concepteur ou de l'utilisateur de veiller à ce que ce système soit sûr et conçu selon les normes de sécurité locales en vigueur.

AVERTISSEMENT – DÉMARRAGES ACCIDENTELS
Dans certaines installations, des démarrages accidentels peuvent provoquer un risque supplémentaire pour la sécurité des personnes ou endommager les machines contrôlées. Dans de tels cas, il est recommandé de doter l'alimentation du démarreur progressif d'un interrupteur d'isolement et d'un coupe-circuit (par exemple, un disjoncteur) contrôlable à partir d'un système de sécurité externe (par exemple, un arrêt d'urgence, un détecteur de défaut).

AVERTISSEMENT – LE DÉMARREUR PEUT DÉMARRER OU S'ARRÊTER À TOUT MOMENT
L’EMX4i répond aux commandes de contrôle de différentes origines et peut par conséquent démarrer ou s'arrêter à tout moment. Toujours déconnecter le démarreur de la tension secteur avant d'accéder au démarreur ou à la charge.
AVERTISSEMENT – DÉCONNECTER L’ALIMENTATION PRINCIPALE AVANT D’ACCÉDER AU DÉMARREUR OU À LA CHARGE

Le démarreur progressif comporte des protections intégrées qui peuvent déclencher des mises en sécurité dans l'éventualité de défauts et ainsi arrêter le moteur. Des fluctuations de tension, des coupures d'alimentation et des blocages du moteur peuvent produire des mises en sécurité de celui-ci.

Le moteur pourrait redémarrer une fois que les causes de l'arrêt ont été résolues, ce qui pourrait mettre en danger le personnel. Toujours déconnecter le démarreur de la tension secteur avant d'accéder au démarreur ou à la charge.

AVERTISSEMENT

Ne pas appliquer la tension du secteur au démarreur tant que tout le câblage n'est pas terminé.

AVERTISSEMENT

Toujours appliquer la tension de commande avant (ou en même temps que) la tension secteur.

AVERTISSEMENT

Lors du raccordement de l'EMX4i en connexion 6 fils, toujours installer un contacteur principal ou un disjoncteur magnéto-thermique à bobine de déclenchement.

AVERTISSEMENT

Si l'entrée de démarrage est fermée lorsque la tension de commande est appliquée, le démarreur tentera d'effectuer un démarrage.

Vérifier que l'entrée de démarrage/arrêt est ouverte avant d'appliquer la tension de commande.
3. System Design

3.1 Feature List

Streamlined setup process
- Configuration profiles for common applications
- Built-in metering and inputs/outputs

Easy to understand interface
- Multi-language menus and displays
- Descriptive option names and feedback messages
- Real-time performance graphs

Supports energy efficiency
- IE3 compatible
- 99% energy efficient when running
- Internal bypass
- Soft start technology avoids harmonic distortion

Extensive range of models
- 24 A~580 A (nominal)
- 200~525 VAC
- 380~690 VAC
- Inside delta installation

Versatile starting and stopping options
- Scheduled start/stop
- Adaptive Control
- Constant Current
- Current Ramp
- Kickstart
- Pump Clean
- Timed voltage ramp start/stop
- Coast To Stop
- DC Brake
- Soft Brake
- Reverse Direction

Customisable protection
- Motor overload
- Excess Start Time
- Undercurrent/Overcurrent
- Underpower/Overpower
- Undervoltage/Overvoltage
- Current imbalance
- Input Trip
- Motor thermistor

Extensive input and output options
- Remote control inputs
  (2 x fixed, 2 x programmable)
- Relay outputs
  (1 x fixed, 2 x programmable)
- Analog output

Optional features for advanced applications
- Smart cards
- Communication options: DeviceNet, Ethernet/IP, Modbus RTU, Modbus TCP, Profibus, Profinet
3.2 Model Code

EMX4i- [0 0 6 9] - -

Control voltage
C1 = 110~120 VAC or 220~240 VAC
C2 = 24 VAC/VDC

Mains voltage
V5 = 200~525 VAC
V7 = 380~690 VAC

Bypass
B = internally bypassed

Nominal current rating

3.3 Model Selection

Starter sizing

The soft starter must be the correct size for the motor and the application.
Select a soft starter that has a current rating at least equal to the motor's full load current (nameplate) rating, at the start duty.

The soft starter's current rating determines the maximum motor size it can be used with. The soft starter's rating depends on the number of starts per hour, the length and current level of the start, and the amount of time the soft starter will be off (not passing current) between starts.

The soft starter's current rating is only valid when used in the conditions specified in the AC53b code - the soft starter may have a higher or lower current rating in different operating conditions.
3.4 Current Ratings

For operating conditions not covered by these ratings charts, contact your local supplier.

IEC ratings

- **AC53b format**

  80 A : AC-53b  3.5 - 15 : 345

3.7 Accessories

Expansion Cards
The EMX4i offers expansion cards for users requiring additional inputs and outputs or advanced functionality. Each EMX4i can support a maximum of one expansion card.

- **Smart Card**
The smart card has been designed to support integration with pumping applications and provides the following additional inputs and outputs:
  - 3 x digital inputs
  - 3 x 4-20 mA transducer inputs
  - 1 x RTD input
  - 1 x USB-B port
  - Remote keypad connector

- **Communication Expansion Cards**
The EMX4i supports network communication via easy-to-install communications expansion cards. Each communications card includes a remote keypad connector port.

Available protocols:
DeviceNet, Ethernet/IP, Modbus RTU, Modbus TCP, Profibus, Profinet.
Remote Keypad
EMX4i starters can be used with a remote keypad, mounted up to 3 metres away from the starter. Each expansion card includes a keypad connection port, or a dedicated keypad connector card is available.

Finger Guard Kit
Finger guards may be specified for personnel safety. Finger guards fit over the soft starter terminals to prevent accidental contact with live terminals. Finger guards provide IP20 protection when used with cable of diameter 22 mm or greater.
Finger guards are compatible with models EMX4i-0184B ~ EMX4i-0580B.

Soft Starter Management Software
PC software can provide real-time or offline management of soft starters.

- For real-time management in a network of up to 254 starters, the software must connect to the soft starter via a Modbus TCP or Modbus RTU card. The software can monitor, control and program the starter across the network.
- The software can be used to program the starter via the USB port on the pumping smart card.
- For offline management, a configuration file generated in the software can be loaded into the starter via the USB port.

3.8 Main Contactor
A main contactor is recommended to protect the soft starter from voltage disturbances on the network, while stopped. Select a contactor with an AC3 rating greater than or equal to the full load current rating of the connected motor.

Use the main contactor output (33, 34) to control the contactor.

⚠️ WARNING
When connecting the EMX4i in inside delta configuration, always install a main contactor or shunt trip circuit breaker.

3.9 Circuit Breaker
A shunt trip circuit breaker may be used instead of a main contactor to isolate the motor circuit in the event of a soft starter trip. The shunt trip mechanism must be powered from the supply side of the circuit breaker or from a separate control supply.

3.10 Power Factor Correction
If power factor correction is used, a dedicated contactor should be used to switch in the capacitors.

To use the EMX4i to control power factor correction, connect the PFC contactor to a programmable relay set to Run. When the motor reaches full speed, the relay will
close and power factor correction will be switched in. Do not use the soft starter relay output to directly switch in power factor correction.

1 Soft starter
2 Programmable output (set = Run)
3 Power factor correction contactor
4 Power factor correction

⚠️ CAUTION
Power factor correction capacitors must be connected to the input side of the soft starter. Connecting power factor correction capacitors to the output side will damage the soft starter.

3.11 Short Circuit Protection Devices (SCPD)
Fuses may be installed to protect the soft starter or the installation.

Type 1 Coordination
Type 1 coordination requires that, in the event of a short circuit on the output side of a soft starter, the fault must be cleared without risk of injury to personnel. There is no requirement that the soft starter must remain operational after the fault.

HRC fuses (such as Ferraz/Mersen AJT fuses) can be used for Type 1 coordination according to IEC 60947-4-2 standard.

Type 2 Coordination
Type 2 coordination requires that in the event of a short circuit on the output side of a soft starter, the fault must be cleared without risk of injury to personnel or damage to the soft starter.

Semiconductor fuses for Type 2 circuit protection are additional to HRC fuses or MCCBs that form part of the motor branch circuit protection.

⚠️ CAUTION
DC Brake: A high brake torque setting can result in peak currents up to motor DOL being drawn while the motor is stopping. Ensure protection fuses installed in the motor branch circuit are selected appropriately.

⚠️ CAUTION
Integral solid state short circuit protection does not provide branch circuit protection. Branch circuit protection must be provided in accordance with the National Electrical Code and any additional local codes.
### 3.12 IEC Coordination with Short Circuit Protection Devices

These fuses were selected based on start current of 300% FLC for 10 seconds.

1 For LS breakers, xx represents FM, FT or AT.
3.14 Fuse Selection for Type 2 Coordination

Type 2 coordination is achieved by using semiconductor fuses. These fuses must be able to carry motor start current and have a total clearing $I^2t$ less than the $I^2t$ of the soft starter SCRs.

When selecting semiconductor fuses for EMX4i, use the $I^2t$ values in the table. For further information on selecting semiconductor fuses, contact your local distributor.

3.15 Specifications

Supply
- Mains voltage (L1, L2, L3)
  - EMX4i-xxxxB-V5: 200~525 VAC (± 10%)
  - EMX4i-xxxxB-V7: 380~690 VAC (± 10%)
- Control voltage (A1, A2, A3)
  - EMX4i-xxxxB-xx-C1 (A1, A2): 110~120 VAC (+10%/-15%), 600 mA
  - EMX4i-xxxxB-xx-C1 (A2, A3): 220~240 VAC (+10%/-15%), 600 mA
  - EMX4i-xxxxB-xx-C2 (A1, A2): 24 VAC/VDC (± 20%), 2.8 A
- Mains frequency: 50 Hz~60 Hz (±5 Hz)
- Rated insulation voltage to earth: 600 VAC
- Rated impulse withstand voltage: 6 kV
- Form designation: Bypassed or continuous, semiconductor motor starter form 1

Short circuit capability
- Coordination with semiconductor fuses: Type 2
- Coordination with HRC fuses: Type 1

Electromagnetic capability (compliant with EU Directive 2014/35/EU)
- EMC Immunity: IEC 60947-4-2
- EMC Emissions: IEC 60947-4-2 Class B

Inputs
- Input rating: Active 24 VDC, 8 mA approx
- Motor thermistor (B4, B5): Trip >3.6 kΩ, reset <1.6 kΩ

Outputs
- Relay outputs: 10 A @ 250 VAC resistive, 5A @ 250 VAC AC15 pf 0.3
- Main contactor (33, 34): Normally Open
- Relay output A (41, 42, 44): Changeover
- Relay output B (53, 54): Normally Open
- Analog output (21, 22): Maximum load: 600 Ω (12 VDC @ 20 mA)
- Accuracy: ± 5%

Environmental
- Operating temperature: -10 °C~60 °C, above 40 °C with derating
- Storage temperature: -25 °C~+ 60 °C
- Operating Altitude: 0~1000 m, above 1000 m with derating
- Humidity: 5%~95% Relative Humidity
- Pollution degree: Pollution Degree 3
- Vibration: IEC 60068-2-6

Protection
- EMX4i-0024B~EMX4i-0135B: IP20
- EMX4i-0184B~EMX4i-0580B: IP00
**Heat dissipation**

During Start ................................................................. 4.5 watts per ampere

During Run

EMX4i-0024B~EMX4i-0052B ............................................. ≤ 35 watts approx
EMX4i-0064B~EMX4i-0135B ............................................. ≤ 50 watts approx
EMX4i-0184B~EMX4i-0250B ........................................... ≤ 120 watts approx
EMX4i-0352B~EMX4i-0580B ........................................... ≤ 140 watts approx

**Motor Overload Protection**

Default: The default settings of parameters 1D, 1E and 1F provide Motor Overload Protection: Class 10, Trip Current 105% of FLA (full load amperage) or equivalent.

**Certification**

CCC ..................................................................................................... GB 14048.6
CE .................................................................................................... EN 60947-4-2
C-UL ...................................................................................... C22.2 Nº 60947-4-2
UL ..................................................................................................... UL 60947-4-2

Marine

Lloyds .............................................................. Lloyds Marine No 1 Specification
ABS ................................................................. Steel Vessels Rules 2010
RCM .............................................................................................. IEC 60947-4-2

**Operational life (internal bypass contacts)**

................................................................. 100 000 operations

**3.16 Disposal Instructions**

Equipment containing electrical components may not be disposed of together with domestic waste.

It must be collected separately as electrical and electronic waste according to local and currently valid legislation.
4. **Installation**

**WARNING**
Do not apply mains voltage to the starter until all wiring is complete.

**WARNING**
Always apply control voltage before (or with) mains voltage.

### 4.1 Command Source

The EMX4i can be started and stopped via the digital inputs, remote keypad, communication network, smart card or scheduled auto-start/stop. The command source can be set via the Setup Tools, or using parameter 1A *Command Source*.

### 4.2 Setup Procedure Overview

1. Mount the soft starter (refer to *Physical Installation* on page 14 for details).
2. Connect control wiring (refer to *Input Terminals* on page 25 for details).
3. Apply control voltage to the starter.
4. Configure your application:
   1. Press **MENU** to open the Menu.
   2. Press ▶ to open the Quick Setup menu.
   3. Scroll through the list to find your application, then press ▶ to begin the configuration process (refer to *Quick Setup* on page 33 for details).
5. If your application is not listed in Quick Setup:
   1. Press ◄ to return to the Menu.
   2. Use ◄ to scroll to Main Menu and press ▶.
   3. Scroll to Motor Details and press ▶, then press ▶ again to edit parameter 1B *Motor Full Load Current*.
   4. Set parameter 1B to match the motor’s full load current (FLC).
   5. Press ◄ to save the setting.
6. Close the Menu by pressing ◄ repeatedly.
7. (Optional) Use the built-in simulation tools to check that the control wiring is connected correctly (refer to *Run simulation* on page 35).
8. Power off the soft starter.
9. Connect the motor cables to starter output terminals 2/T1, 4/T2, 6/T3.
10. Connect mains supply cables to starter input terminals 1/L1, 3/L2, 5/L3 (refer to *Power Terminations* on page 28).

The soft starter is now ready to control the motor.
4.3 Inputs

**CAUTION**
The control inputs are powered by the soft starter. Do not apply external voltage to the control input terminals.

**NOTE**
Cables to the control inputs must be segregated from mains voltage and motor cabling.

**Input Terminals**

**Motor Thermistor**

Motor thermistors can be connected directly to the EMX4i. The soft starter will trip when the resistance of the thermistor circuit exceeds approximately 3.6 kΩ or falls below 20 Ω.

The thermistors must be wired in series. The thermistor circuit should be run in screened cable and must be electrically isolated from earth and all other power and control circuits.

**NOTE**
The thermistor input is disabled by default, but activates automatically when a thermistor is detected. If thermistors have previously been connected to the EMX4i but are no longer required, use the Thermistor Reset function to disable the thermistor. Thermistor Reset is accessed via the Setup Tools.
Installation

Reset/Starter Disable
The reset input (10, 11) is normally closed by default. The EMX4i will not perform a start if the reset input is open. The display will show "Not Ready". If the reset input opens while the EMX4i is running, the starter will remove power and allow the motor to coast to stop.

**NOTE**
The reset input can be configured for normally open or normally closed operation. Use parameter 7I Reset/Enable Logic.

Start/Stop
The EMX4i requires two-wire control.

! **WARNING**
If the start input is closed when control voltage is applied, the starter will attempt to start.
Check that the start/stop input is open before applying control voltage.

**NOTE**
The EMX4i will only accept commands from the control inputs if parameter 1A Command Source is set to Digital Input.

Programmable Inputs
The programmable inputs (13, 14 and 13, 15) allow external equipment to control the starter.
The operation of the programmable inputs is controlled by parameters 7A~7H.

USB Port
The USB port can be used to upload a configuration file, or download parameter settings and event log information from the starter. Refer to USB Save & Load on page 36 for details.
4.4 Outputs

Output Terminals

<table>
<thead>
<tr>
<th>Terminal</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>21, 22</td>
<td>Analog output</td>
</tr>
<tr>
<td>33, 34</td>
<td>Main contactor output</td>
</tr>
<tr>
<td>41, 42, 44</td>
<td>Relay output A (default = Run)</td>
</tr>
<tr>
<td>53, 54</td>
<td>Relay output B (default = Run)</td>
</tr>
</tbody>
</table>

**Analog Output**
The EMX4i has an analog output, which can be connected to associated equipment to monitor motor performance.

The operation of the analog output is controlled by parameters 9A~9D.

**Main Contactor Output**
The main contactor output (33, 34) closes as soon as the soft starter receives a start command and remains closed while the soft starter is controlling the motor (until the motor starts a coast to stop, or until the end of a soft stop). The main contactor output will also open if the soft starter trips.

⚠️ **CAUTION**
Some electronic contactor coils are not suitable for direct switching with PCB mount relays. Consult the contactor manufacturer/supplier to confirm suitability.

**Programmable Outputs**
The programmable outputs (41, 42, 44 and 53, 54) can report the status of the starter, or can be used to control associated equipment.

The operation of the programmable outputs is controlled by parameters 8A~8F.
4.5 Control Voltage

Control Voltage Terminals

Connect the control supply according to the supply voltage being used.

- EMX4i-xxxxB-xx-C1 (110~120 VAC): A1, A2
- EMX4i-xxxxB-xx-C1 (220~240 VAC): A2, A3
- EMX4i-xxxxB-xx-C2 (24 VAC/VDC): A1, A2

UL Compliant Installation

For models EMX4i-0184B to EMX4i-0580B to be UL compliant, supplementary or branch overcurrent protection must be used on the control circuit supply (A1, A2, A3), in accordance with the electrical code applicable at the installation location.

4.6 Power Terminations

NOTE

Some units use aluminium busbars. When connecting power terminations, we recommend cleaning the surface contact area thoroughly (using an emery or stainless steel brush) and using an appropriate jointing compound to prevent corrosion.

The power input and output terminals for EMX4i are at the bottom of the unit.

- Models EMX4i-0024B~EMX4i-0135B use cage clamps. Use only copper stranded or solid conductors, rated for 75 °C or higher.
- Models EMX4i-0184B~EMX4i-0580B use busbars. Use copper or aluminium conductors, stranded or solid, rated for 60 °C/75 °C.
INSTALLATION

EMX4i-0024B~EMX4i-0135B

Cable size: 6-70 mm² (AWG 10-2/0)
Torque: 4 Nm (2.9 ft-lb)
14 mm (0.55 inch)

Torx T20 x 150
Flat 7 mm x 150

EMX4i-0184B~EMX4i-0250B
19 Nm (14.0 ft-lb)

EMX4i-0352B~EMX4i-0580B
66 Nm (49.0 ft-lb)

NOTE
If the installation requires large diameter cables, it is possible to complete each termination with two smaller cables, one on each side of the busbar.

Wiring connectors
Select a connector according to the wire size, material and your application requirements.
A compression connector is recommended for models EMX4i-0184B to EMX4i-0580B. The recommended crimping tool is TBM8-750.

<table>

<td>60171</td>
</tr>
</tbody>
</table>
**Motor Connection**

The EMX4i can be connected to the motor in-line or inside delta (also called three-wire and six-wire connection). When connecting in inside delta, enter the motor full load current (FLC) for parameter 1B. The EMX4i will automatically detect whether the motor is connected in-line or inside delta and will calculate the correct inside delta current level.

**NOTE**
If the starter is not correctly detecting the motor connection, use parameter 20F Motor Connection.

- **In-line installation**
  - K1 Main contactor (strongly recommended)
  - F1 Fuses or circuit breaker (optional)
  - 33, 34 Main contactor output

- **Inside delta installation**
  - K1 Main contactor
  - F1 Fuses or circuit breaker (optional)
  - 33, 34 Main contactor output
4.7 Typical Installation

The EMX4i is installed with a main contactor (AC3 rated). Control voltage must be supplied from the input side of the contactor.

The main contactor is controlled by the main contactor output (33, 34).

### 4.8 Quick Setup

The Quick Setup Menu makes it easy to configure the EMX4i for common applications. The EMX4i guides you through the most common installation parameters, and suggests a typical setting for the application. You can adjust each parameter to suit your exact requirements.

All other parameters remain at default values. To change other parameter values or review the default settings, use the menu (refer to Parameter List for details).

Always set parameter 1B *Motor Full Load Current* to match the motor's nameplate full load current.

</table>

**NOTE**

The Adaptive Start and Stop Profile settings only apply when using Adaptive Control. The settings are ignored for all other start and stop modes.
5. Setup Tools

Setup Tools includes options to load or save parameters to a backup file, set the starter's network address, check the status of the inputs and outputs, reset the thermal models or test operation using the Run Simulation.

To access the Setup Tools, press **MENU** to open the Menu then select Setup Tools.

### 5.1 Set Date and Time

To set the date and time:

1. Press **MENU** to open the menu then select Setup Tools.
2. Scroll to Set Date & Time.
3. Press the ➤ button to enter edit mode.
4. Press the ➤ and ◀ buttons to select which part of the date or time to edit.
5. Use the ▲ and ▼ buttons to change the value.
6. Press ➤ after the last digit to save the setting. When the action has been completed, the screen will briefly display a confirmation message, then return to the previous menu level.

### 5.2 Command Source

The EMX4i can be started and stopped via the digital inputs, remote keypad, communication network, smart card or scheduled auto-start/stop. The command source can be set via the Setup Tools, or using parameter 1A **Command Source**.

If the remote keypad is installed, the **LOCAL/REMOTE** button provides shortcut access to the Command Source function in Setup Tools.

### 5.3 Commissioning

Commissioning lets the starter be started and stopped via the local keypad. Use the ▲ and ▼ buttons to select a function, then press ➤ to send the selected command to the starter. The available functions are:

- Quick stop (coast to stop)/Reset
- Start
- Stop
5.4 Run simulation

The run simulation simulates a motor starting, running and stopping to confirm that the soft starter and associated equipment have been installed correctly.

**NOTE**  
The soft starter must be disconnected from mains voltage.  
The simulation is only available when the soft starter is in Ready state.

To use the run simulation:
1. Press MENU to open the menu then select Setup Tools.
2. Scroll to Run Simulation and press ►.

3. Apply a start command from the selected command source. The EMX4i simulates its pre-start checks and closes the main contactor relay. The Run LED flashes.

**NOTE**  
If mains voltage is connected, an error message is shown.

4. Press ◄. The EMX4i simulates starting. The Run LED flashes.

5. Press ◄. The EMX4i simulates running.

6. Apply a stop command from the selected command source. The EMX4i simulates stopping. The Run LED flashes.

7. Press ◄. The Ready LED flashes and the main contactor relay opens.

8. Press ◄. The EMX4i activates then deactivates each programmable output.

9. Press ◄ to return to the Setup Tools.
5.5 Load/Save Settings

Load/Save Settings allows users to:
- Reset the EMX4i’s parameters to default values
- Load parameter settings from an internal file
- Save the current parameter settings to an internal file

The internal file contains default values until a user file is saved.

To load or save parameter settings:
1. Press **MENU** to open the menu then select Setup Tools.
2. Scroll to Load/Save Settings and press the ► button.
3. Scroll to the required function and press the ► button.

4. At the confirmation prompt, select YES to confirm or NO to cancel, then press ► to proceed.

When the action has been completed, the screen will briefly display a confirmation message, then return to the previous menu level.

5.6 USB Save & Load

The USB Save & Load menu lets you:
- Save parameter settings and all event log entries to an external file (CSV format)
- Save parameter settings to an external file (proprietary format)
- Load parameter settings from a previously saved external file
- Load custom messages to display on the keypad when a programmable input is active

**NOTE**
The EMX4i supports FAT32 file systems. The EMX4i’s USB functions are not compatible with NTFS file systems.
Save & Load Procedure

1. Connect the external drive to the USB port.
2. Press MENU to open the menu then select Setup Tools.
3. Scroll to USB Save & Load and press the ► button.
4. Scroll to the required function and press the ► button.
   - USB Save & Load
     - Save Params and Logs
     - Save Master Params
     - Load Master Params
   - Save Params and Logs
     - No
     - Yes
5. At the confirmation prompt, select YES to confirm or NO to cancel, then press ► to proceed.

When the action has been completed, the screen will briefly display a confirmation message, then return to the previous menu level.

File Locations and Formats

Save Parameters and Logs: The EMX4i will create a directory at the top level of the USB drive, named with the soft starter’s serial number. The event log and parameter settings are saved as individual CSV files, and the soft starter’s software and system information are saved to a text file.

Save Master Parameters: The EMX4i will create a file called Master_Parameters.par, in the top level of the USB drive.

Load Master Parameters: The EMX4i will load the file Master_Parameters.par from the top level of the USB drive. This file can be created or edited using WinMaster management software.

Load Custom Message: The EMX4i will load the files Custom_Message_A.txt and Custom_Message_B.txt from the top level of the USB drive.
5.7 Auto-Start/Stop

The EMX4i can be configured to automatically start and/or stop the motor at a particular time, or run it in cycles of a specified duration.

The Auto-Start/Stop option in Setup Tools gives quick access to the auto-start/stop parameters.

1. Press MENU to open the menu then select Setup Tools.
2. Scroll to Auto-Start/Stop and press the ► button.
3. Scroll to the required function and press the ► button.

4. Adjust the settings as required:
   - Press the ► and ◄ buttons to select which information to edit.
   - Use the ▲ and ▼ buttons to change the value.

5. To save changes, press the ► button. The EMX4i will confirm the changes.

To cancel changes, press the ◄ button.

5.8 Network Address

To use the EMX4i on an Ethernet network, separate addresses must be configured for:

- IP Address
- Gateway Address
- Subnet Mask

To set the network addresses:

1. Press MENU to open the menu then select Setup Tools.
2. Scroll to Network Address and press the ► button.
3. Scroll to the required function and press the ► button.
4. The first digit of the address will be highlighted.
5. Use ◄ and ► to select which digit to alter.
   - Use the ▲ and ▼ buttons to change the value.
6. Press ► after the last digit to save the setting.

   When the action has been completed, the screen will briefly display a confirmation message, then return to the previous menu level.

   **NOTE**
   The network address can also be set using parameters 12H~12S.

   **NOTE**
   To configure the EMX4i for use with other communication protocols, use parameters 12A~12G.
5.9 Digital I/O State
The top line of the screen shows the start/stop, reset and programmable inputs.
The bottom line of the screen shows the fixed Main Contactor output, then programmable outputs A and B.

<table>
<thead>
<tr>
<th>Inputs</th>
<th>Outputs</th>
</tr>
</thead>
<tbody>
<tr>
<td>00000000</td>
<td>00000000</td>
</tr>
</tbody>
</table>

5.10 Analog I/O State
The top line of the screen shows the state of the motor thermistor input.
The bottom line of the screen shows the value of the analog output.

Thermistor input:
S = Short
H = Hot
C = Cold
O = Open

5.11 Serial Number & Rating
The top line of the screen shows the product name.
The middle line shows the unit's serial number.
The bottom line of the screen shows the model number.

Digital I/O State
Inputs: 00000000
Outputs: 00000000

Analog I/O State
Thermistor: 0
4-20mA Output: 04.0 mA

Serial Number & Rating
EMX4i
D3456-D23
0410-V5-S1C1
5.12 Software Versions
The software versions screen reports the version of each software component in the starter:
- user interface
- motor control
- remote keypad (if connected)
- parameter list
- bootloader
- expansion card (if fitted)

NOTE
Updated software, including alternative languages, can be loaded into the starter via the USB port if required. Contact your local supplier for further information.

5.13 Thermistor Reset
The thermistor input is disabled by default, but activates automatically when a thermistor is detected. If thermistors have previously been connected to the EMX4i but are no longer required, use the Thermistor Reset function to disable the thermistor.

5.14 Reset Thermal Model
The soft starter's thermal modelling software constantly monitors the motor's performance. This allows the starter to calculate the motor's temperature and ability to start successfully at any time.

The thermal model can be reset if required.

CAUTION
Resetting the motor thermal model will compromise thermal model protection and may compromise motor life. Only reset the thermal model in an emergency.
6. Logs

The Logs Menu provides information on events, trips and starter performance. To access the Logs Menu on the local keypad, press **MENU** to open the Menu then select Logs. On the remote keypad, press **LOGS**.

6.1 Event Log

The Event Log stores details of the starter's most recent trips, warnings, and operations (including starts, stops and configuration changes).

Event 1 is the most recent and event 384 is the oldest stored event.

**NOTE**

The event log can be exported to an external file for analysis away from the starter. Refer to **USB Save & Load** on page 36 for details.

6.2 Counters

The counters store statistics on the starter's operation:

- Hours run (lifetime and since counter last reset)
- Number of starts (lifetime and since counter last reset)
- Number of times the thermal model has been reset

To view the counters:

1. Open the Logs.
2. Scroll to counters and press ▶.
3. Use the ▲ and ▼ buttons to scroll through the counters. Press ▶ to view details.
4. To reset a counter, press ▶ then use the ▲ and ▼ buttons to select Reset/Do Not Reset. Press **STORE** to confirm the action.

To close the counter and return to the Logs, press ▶.

6.3 QR Code

The EMX4i can generate a QR code which allows a smartphone to display key information about the starter, including serial number, firmware versions and installed options, plus details of the starter's three most recent trips. This information can be useful when requesting assistance from your local supplier.

**NOTE**

You must install the free Pocket Technician app in order to read the QR code.
# 7. Keypad and Feedback

## 7.1 The Keypad

<table>
<thead>
<tr>
<th>Local keypad</th>
<th>Remote keypad (if installed)</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Keypad Diagram" /></td>
<td><img src="image" alt="Keypad Diagram" /></td>
</tr>
</tbody>
</table>

1. Four-line display for status and programming details.
2. Status LEDs
3. Menu navigation buttons:
   - **◂**: Exit the menu or parameter, or cancel a parameter change. On the local keypad, this button also resets a trip.
   - **▸**: Enter a menu or parameter, or save a parameter change.
   - **▲ ▼**: Scroll to the next or previous menu or parameter, change the setting of the current parameter or scroll through the status screens.
4. Shortcut to the command source menu in Setup Tools.
5. Soft starter local control buttons
6. Shortcut buttons for quick access to common tasks.
   - **LOGS**: Open the Logs Menu.
   - **ALT**: Select which graph to view, or pause/restart the graph (hold longer than 0.5 seconds)
   - **TOOLS**: Open the Setup Tools.
7.2 Remote Keypad

The remote keypad can be used to control the soft starter if parameter 1A
Command Source is set to 'Remote Keypad'.

- If the remote keypad is not selected as the command source, the START,
  STOP and RESET buttons will have no effect.
- The menu navigation buttons and display on the remote keypad are
  always active.
- If a button is pressed on the starter’s local keypad, the display on the
  remote keypad will update to match.

**NOTE**
The remote keypad can be safely connected or removed while the starter
is running. It is not necessary to remove mains or control voltage.

**NOTE**
If parameter 1A Command Source is set to Remote Keypad, removing the
remote keypad will cause a trip.

7.3 Lighten/Darken the Display

The backlight on the display can be adjusted:

- to lighten the display, hold down the button and press the key
- to darken the display, hold down the button and press the key

**NOTE**
The local and remote keypads can be adjusted independently.
7.4 Starter status LEDs

<table>
<thead>
<tr>
<th>LED name</th>
<th>On</th>
<th>Flashing</th>
</tr>
</thead>
</table>
| Ready    | The motor is stopped and the starter is ready to start. | The motor is stopped and the starter is not ready to start:  
  - waiting for the Restart Delay (parameter 5P)  
  - the thermal models indicate the starter and/or motor are too hot to start safely  
  - the reset input (10, 11) is open |
| Run      | The motor is in run state (receiving full voltage). | The motor is starting or stopping. |
| Trip     | The starter has tripped. | The starter is in warning state. |
| Local    | The starter is being controlled via a remote keypad. | — |

If all LEDs are off, the starter is not receiving control voltage.

7.5 Displays

The keypad displays a wide range of performance information about the soft starter. To scroll through the feedback screens, press the ▲ and ▼ buttons.

**Starter information**

At power-up, the starter information screen shows details of the starter's rating, software versions and serial number.

Welcome
01.01/01.00/01.00
EMX4i-0069B-V5-S1C1

Software versions: user interface, motor control, remote keypad
Model code: current rating, mains voltage, frame size, control voltage
(remote keypad software version is only displayed when a remote keypad is connected)

**Starter status screen**

- 69.0 A
- Running
- 69.0 A 415 V

- motor running current
- Starter status
- Parameters 10H User Parameter 1 and 10I User Parameter 2

**Current**

The current screen shows real-time line current on each phase.

| Phase Currents | 000.0A 000.0A 000.0A |
Last Start Information
The last start information screen shows details of the most recent successful start:

- start duration (seconds)
- maximum start current drawn (as a percentage of motor full load current)
- calculated rise in motor temperature

Last start information:

- Duration: 010 s
- Maximum current: 350% of full load current
- Temperature rise: 5%

User configurable screen
The programmable screen can be configured to show the most important information for the particular application. Use parameters 10J ~ 10M to select which information to display.

Mains Frequency: 59.7 Hz
Motor pf: 1.01
Motor Power: 37.0 kW
Motor Temp: 85%

Date and Time
The date/time screen shows the current system date and time (24 hour format). For details on setting the date and time, refer to Set Date and Time on page 34.

Performance Graph
The performance graph provides a real-time display of operating performance. Use parameters 10B~10E to format the graph.

The display on the main keypad shows information for motor current.

If a remote keypad is connected, press **ALT** to change the graph data. The graph can show:

- motor current
- motor temperature
- motor pf
- analog input data from the smart card (if installed)
8. Operation

8.1 Start, Stop and Reset Commands
The EMX4i can be started and stopped via the digital inputs, remote keypad, communication network, smart card or scheduled auto-start/stop. The command source can be set via the Setup Tools, or using parameter 1A Command Source.

- The EMX4i will only accept Start and Reset commands from the designated command source.
- The EMX4i will accept Stop commands from the designated command source, but can be forced to stop by opening the reset input, or by opening the start/stop input during an auto-start/stop cycle.
- The programmable input can be used to override the selected command source (refer to parameter 7A Input A Function).

8.2 Command Override
The programmable input (13, 14) can be used to override the command source, for situations where the normal control mechanism has been lost. Set parameter 7A Input A Function to the alternative command source (eg 'Command Override: Keypad').

While the input is active, the starter will only accept commands from the selected override source. To restore control to the command source selected in parameter 1A Command Source, reopen the input.

8.3 Auto-Start/Stop
The EMX4i can be configured to automatically start and/or stop the motor at a particular time, or run it in cycles of a specified duration.

- **NOTE**
  Start delay, restart delay and auto-reset delay all apply to auto-start operation.

**Clock mode**
The starter can start and/or stop the motor once per day.

For clock mode to operate:

- parameter 4A Auto-Start/Stop Mode must be set to 'Enable'
- parameter 1A Command Source must be set to 'Clock'
- the reset input must be closed
- the start input (11, 12) must be active. This allows the EMX4i to be stopped via the digital inputs in an emergency.

Clock mode operation is controlled by parameters 4D ~ 4X.

**Timer mode**
The starter can automatically stop the motor after a specified run time, then restart it after a specified off (stopped) time. The starter will repeat the cycle while the start signal remains active.
For timer mode to operate:

- parameter 4A *Auto-Start/Stop Mode* must be set to 'Enable'
- parameter 1A *Command Source* must be set to 'Timer'
- the reset input must be closed
- the first start must be commanded by a start signal

Timer mode operation is controlled by parameters 4B ~ 4C.

### 8.4 PowerThrough

PowerThrough allows the soft starter to control the motor even if the soft starter is damaged on one phase. The EMX4i will use two-phase control techniques to soft start and soft stop the motor.

#### NOTE

The starter will trip on Lx-Tx Shorted on the first start attempt after control power is applied. PowerThrough will not operate if control power is cycled between starts.

- PowerThrough is only available with in-line installations. If the starter is installed inside delta, PowerThrough will not operate.
- PowerThrough remains active until '3-Phase Control Only' is reselected. While operating in PowerThrough, the trip LED will flash and the display will indicate '2 Phase - Damaged SCR'.

PowerThrough operation does not support Adaptive Control soft starting or soft stopping. In PowerThrough, the EMX4i will automatically select constant current soft starting and timed voltage ramp soft stopping. If PowerThrough is enabled, parameters 2C and 2D must be set appropriately.

#### CAUTION

PowerThrough uses a two-phase soft start technology and additional care is required when sizing circuit breakers and protection. Contact your local supplier for assistance.
8.5 Emergency Mode

Emergency mode allows the EMX4i to run the motor and ignore trip conditions. Emergency mode is controlled via a programmable input (input A 13, 14 or input B 13, 15) and parameter 7A _Input A Function_ / 7E _Input B Function_ must be set to 'Emergency Mode'. A closed circuit across 13, 14 activates emergency mode. When the EMX4i receives a start command, it will continue to run until a stop command is received, ignoring all trips and warnings.

Emergency mode can be used in conjunction with any command source.

**NOTE**

Although emergency mode operation satisfies the functionality requirements of Fire Mode, we do not recommend its use in situations that require testing and/or compliance with specific standards as it is not certified.

**CAUTION**

Continued use of emergency mode is not recommended. Emergency mode may compromise the starter and/or motor life as all protections and trips are disabled.

Using the starter in emergency mode will void the product warranty.

8.6 Auxiliary Trip

An external trip circuit (such as a low pressure alarm switch for a pumping system) can be used to trip the soft starter and stop the motor. The external circuit is connected to a programmable input (input A 13, 14 or input B 13, 15). To control the behaviour of the trip, set the following parameters:

- **Parameter 7A _Input A Function_** select 'Input Trip (N/O)'.
- **Parameter 7B _Input A Trip_** set as required. For example, 'Run Only' limits the input trip to when the soft starter is running only.
- **Parameter 7C _Input A Trip Delay_** sets a delay between the input activating and the soft starter tripping.
- **Parameter 7D _Input A Initial Delay_** sets a delay before the soft starter monitors the state of the input, after the start signal. For example, a delay may be required to allow time for pipeline pressure to build up.
- **Parameter 7J _Input A Name_** select a name, eg 'Input A Trip' (optional).
8.7 Typical Control Methods

The requirements of an application differ between each installation, but the methods listed below are often a good starting point for common applications.

8.8 Soft Start Methods

Constant Current

Constant current is the traditional form of soft starting, which raises the current from zero to a specified level and keeps the current stable at that level until the motor has accelerated.

Constant current starting is ideal for applications where the start current must be kept below a particular level.

![Graph of Constant Current Starting]

Constant Current with Current Ramp

Current ramp soft starting raises the current from a specified starting level (1) to a maximum limit (3), over an extended period of time (2).

Current ramp starting can be useful for applications where:

- the load can vary between starts (for example a conveyor which may start loaded or unloaded). Set the initial current (parameter 2C) to a level that will start the motor with a light load, and the current limit (parameter 2D) to a level that will start the motor with a heavy load.
- the load breaks away easily, but starting time needs to be extended (for example a centrifugal pump where pipeline pressure needs to build up slowly).
- the electricity supply is limited (for example a generator set), and a slower application of load will allow greater time for the supply to respond.
Constant Current with Kickstart

Kickstart provides a short boost of extra torque at the beginning of a start, and can be used in conjunction with current ramp or constant current starting. Kickstart can be useful to help start loads that require high breakaway torque but then accelerate easily (for example helical rotor pumps).

Timed Voltage Ramp

Timed voltage ramp (TVR) soft starting ramps the application of voltage to the motor over a defined time period. The voltage ramp reduces the initial starting torque and slows the motor's rate of acceleration.

TVR starting can be useful for applications where multiple motors of different sizes are connected in parallel, and/or the loads are not mechanically linked.

**NOTE**
TVR soft starting is not suitable for high inertia loads (such as fans), which require a high level of voltage to accelerate the load.

**NOTE**
For multiple motors of the same sizes, and/or mechanically coupled loads, use constant current starting.

For a timed voltage ramp start, the following are typical values and can be adjusted to suit your specific application:

- Add the FLC value of all the connected motors. Use this combined value to set parameter 1B *Motor Full Load Current*. (Note that the combined value must not exceed the starter rating.)

- Set parameter 2C *Initial Current* to 100%, parameter 2D *Current Limit* to 500% and set the ramp time as required (parameter 2B *Start Ramp Time*).
Adaptive Control for Starting

In an adaptive control soft start, the EMX4i adjusts the current in order to start the motor within a specified time and using a selected acceleration profile.

**NOTE**
The EMX4i will apply the current limit on all soft starts, including adaptive control. If the current limit is too low or the start ramp time (parameter 2B) is too short, the motor may not start successfully.

![Adaptive Start Profile](image)

---

**Adaptive Start Profile (parameter 2E):**
1. Early Acceleration
2. Constant Acceleration
3. Late Acceleration
4. Start Ramp Time (parameter 2B)

---

**Fine-tuning Adaptive Control**

If the motor does not start or stop smoothly, adjust the adaptive control gain (parameter 2L). The gain setting determines how much the EMX4i will adjust future adaptive control starts and stops, based on information from the previous start. The gain setting affects both starting and stopping performance.

- If the motor accelerates or decelerates too quickly at the end of a start or stop, increase the gain setting by 5%~10%.
- If the motor speed fluctuates during starting or stopping, decrease the gain setting slightly.

**NOTE**
The EMX4i tunes Adaptive Control to match the motor. Changing the following parameters will reset Adaptive Control and the first start/stop cycle will use constant current start/timed voltage ramp stop: 1B *Motor Full Load Current*, 2D *Current Limit*, 2L *Adaptive Control Gain*.
8.9 Stop Methods

Coast to Stop

Coast to stop lets the motor slow at its natural rate, with no control from the soft starter. The time required to stop will depend on the type of load.

Timed Voltage Ramp Soft Stop

Timed voltage ramp reduces the voltage to the motor gradually over a defined time. This can extend the stopping time of the motor and may avoid transients on generator set supplies.

**NOTE**

The load may continue to run after the stop ramp is complete.

![Graph showing voltage ramp](image)

1: Stop Time (parameter 2J)

Adaptive Control for Stopping

In an adaptive control soft stop, the EMX4i controls the current in order to stop the motor within a specified time and using a selected deceleration profile. Adaptive Control can be useful in extending the stopping time of low inertia loads.

If adaptive control is selected, the first soft stop will use timed voltage ramp. This allows the EMX4i to learn the characteristics of the connected motor. This motor data is used by the EMX4i during subsequent adaptive control stops.

**NOTE**

Adaptive control does not actively slow the motor down and will not stop the motor faster than a coast to stop. To shorten the stopping time of high inertia loads, use brake.

**CAUTION**

Adaptive Control controls the motor’s speed profile, within the programmed time limit. This may result in a higher level of current than traditional control methods.

If replacing a motor connected to an EMX4i programmed for Adaptive Control starting or stopping, the starter will need to learn the characteristics of the new motor. Change the value of parameter 1B Motor Full Load Current or parameter 2L Adaptive Control Gain to initiate the re-learning process. The next start will use constant current and the next stop will use timed voltage ramp.
Adaptive Control is ideal for pumping applications, where it can minimise the damaging effects of fluid hammer. We recommend testing the three profiles to identify the best profile for the application.

### Adaptive Stop Profile Application

<table>
<thead>
<tr>
<th>Adaptive Stop Profile</th>
<th>Application</th>
</tr>
</thead>
<tbody>
<tr>
<td>Late Deceleration</td>
<td>High head systems where even a small decrease in motor/pump speed results in a rapid transition between forward flow and reverse flow.</td>
</tr>
<tr>
<td>Constant Deceleration</td>
<td>Low to medium head, high flow applications where the fluid has high momentum.</td>
</tr>
<tr>
<td>Early Deceleration</td>
<td>Open pump systems where fluid must drain back through the pump without driving the pump in reverse.</td>
</tr>
</tbody>
</table>

**DC Brake**

Brake reduces the time required to stop the motor.

During braking an increased noise level from the motor may be audible. This is a normal part of motor braking.

⚠️ **CAUTION**

When using DC brake, the mains supply must be connected to the soft starter (input terminals L1, L2, L3) in positive phase sequence.

⚠️ **CAUTION**

If the brake torque is set too high, the motor will stop before the end of the brake time and the motor will suffer unnecessary heating which could result in damage. Careful configuration is required to ensure safe operation of the starter and motor.

A high brake torque setting can result in peak currents up to motor DOL being drawn while the motor is stopping. Ensure protection fuses installed in the motor branch circuit are selected appropriately.

⚠️ **CAUTION**

Brake operation causes the motor to heat faster than the rate calculated by the motor thermal model. If you are using brake, install a motor thermistor or allow sufficient restart delay (parameter 5P).
Parameter settings:
- Parameter 2I Stop Mode: set to 'DC Brake'.
- Parameter 2J Stop Time: This is the total braking time (1) and must be set sufficiently longer than the brake time (parameter 2P) to allow the pre-braking stage to reduce motor speed to approximately 70%. If the stop time is too short, braking will not be successful and the motor will coast to stop.
- Parameter 2O DC Brake Torque: set as required to slow the load. If set too low, the motor will not stop completely and will coast to stop after the end of the braking period.
- Parameter 2P DC Brake Time: Set Brake Time (parameter 2P) to approximately one quarter of the programmed Stop Time. This sets the time for the Full Brake stage (2).

**DC Brake with External Zero Speed Sensor**

For loads which may vary between braking cycles, install an external zero-speed sensor to ensure the soft starter ends DC braking when the motor has reached a standstill. This avoids unnecessary motor heating.

Configure DC brake for the longest braking time required, and also set parameter 7A Input A Function to 'Zero Speed Sensor'. When the motor reaches a standstill, the zero speed sensor opens the circuit across 13, 14 and the soft starter terminates the stop.
**Soft Brake**

For applications with high inertia and/or a variable load requiring the maximum possible braking torque, the EMX4i can be configured for soft braking.

The EMX4i uses a changeover relay to control forward run and braking contactors. While braking, the EMX4i reverses the phase sequence to the motor and supplies reduced current, gently slowing the load.

When motor speed approaches zero, the zero speed sensor (A2) stops the soft starter and opens the braking contactor (K2).

Soft braking can be used with both the primary and secondary motor sets, and must be configured separately for each.

Parameter settings:

- Parameter 2I *Stop Mode*: set to 'Soft Brake'
- Parameter 2Q *Brake Current Limit*: set as required to slow the load
- Parameter 2R *Soft Brake Delay*: controls the time the soft starter will wait after a stop signal is received, before it begins to supply braking current to the motor. Set to allow time for K1 and K2 to switch.
- Parameter 7A *Input A Function*: set to 'Zero Speed Sensor'
- Parameter 8A *Relay A Function*: set to 'Soft Brake Relay'

<tr>
<td>A2</td>
<td>Zero speed sensor</td>
</tr>
</tbody>
</table>
8.10 Pump Clean

The starter can perform a pump clean function before soft starting the motor. This can help dislodge debris from the impeller.

Pump clean starts the motor in reverse then forward direction, then stops the motor. Pump clean can be configured to repeat the process up to 5 times. After the specified number of cleaning cycles, the starter performs the programmed soft start.

Pump clean operation is controlled by the start/stop input (11, 12). A programmable input must be set to pump clean (refer to parameter 7A Input A Function for details) and the input must be closed when the start signal is applied.

Reverse torque/Forward current (%FLC)

1: Reverse Torque (parameter 11A)
2: Reverse Time (parameter 11B)
3: Forward Current Limit (parameter 11C)
4: Forward Time (parameter 11D)
5: Pump Stop Time (parameter 11F)
6: Cleaning cycle
7: Pump Clean Cycles (parameter 11G)
8: Programmed soft start

8.11 Reverse Direction Operation

The starter can control a reversing contactor, to operate the motor in reverse direction. When reverse operation is selected, the starter will perform a soft start using the opposite phase sequence from normal operation.

Reverse operation is controlled by the start/stop input (11, 12). A programmable input must be set to reverse direction (parameter 7A Input A Function) and an output must be set to reversing contactor (parameter 8A Relay A Function).

The input must be closed when the start signal is applied. The starter will keep the reverse relay in the same state until the end of the starting/stopping cycle.

This example shows a simple installation, but many different configurations are possible depending on your application requirements. Contact your local supplier for an application note showing more installation options.

**NOTE**
The first start after the direction is changed will be constant current.

**NOTE**
If phase sequence protection is required, install the reversing contactor on the output (motor) side of the soft starter.
## 8.12 Jog Operation

Jog runs the motor at reduced speed, to allow alignment of the load or to assist servicing. The motor can be jogged in either forward or reverse direction.

Jog is only available when the starter is controlled via the digital inputs (parameter 1A *Command Source* = 'Digital Input'). To operate in jog, a programmable input must be set to jog (refer to parameter 7A for details) and the input must be closed when the start signal is applied.

⚠️ **CAUTION**

Slow speed running is not intended for continuous operation due to reduced motor cooling.

Jog operation causes the motor to heat faster than the rate calculated by the motor thermal model. If you are using jog, install a motor thermistor or allow sufficient restart delay (parameter 5P).

The maximum available torque for jog forward is approximately 50%~75% of motor full load torque (FLT) depending on the motor. The torque when the motor is jogged in reverse is approximately 25% to 50% of FLT.

Parameters 2H and 3J *Jog Torque* control how much of the maximum available jog torque the soft starter will apply to the motor.

<p>| | |</p>
<table>
<thead>
<tr>

<td>K1/K2 coil supply</td>
</tr>
</tbody>
</table>

K1 Forward run contactor  
K2 Reversing contactor
NOTE
Torque settings above 50% may cause increased shaft vibration.

8.13 Inside Delta Operation
When connecting in inside delta, enter the motor full load current (FLC) for parameter 1B. The EMX4i will automatically detect whether the motor is connected in-line or inside delta and will calculate the correct inside delta current level.

Adaptive Control, Jog, Brake and PowerThrough functions are not supported with inside delta (six-wire) operation. If these functions are programmed when the starter is connected inside delta the behaviour is as given below:

<table>
<thead>
<tr>
<th>Function</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Adaptive Control Start</td>
<td>The starter performs a constant current start.</td>
</tr>
<tr>
<td>Adaptive Control Stop</td>
<td>The starter performs a TVR soft stop if parameter 2J Stop Time is &gt;0 secs.</td>
</tr>
<tr>
<td></td>
<td>If parameter 2J is set to 0 secs the starter performs a coast to stop.</td>
</tr>
<tr>
<td>Jog</td>
<td>The starter issues a warning with the error message Unsupported option.</td>
</tr>
<tr>
<td>DC Brake</td>
<td>The starter performs a coast to stop.</td>
</tr>
<tr>
<td>Soft Brake</td>
<td>The starter performs a coast to stop.</td>
</tr>
<tr>
<td>PowerThrough</td>
<td>The starter trips with the error message Lx-Tx Shorted.</td>
</tr>
</tbody>
</table>

NOTE
When connected in inside delta, the EMX4i will not detect phase loss on T2 during run.

NOTE
If the starter is not correctly detecting the motor connection, use parameter 20F Motor Connection.
8.14 Secondary Motor Set

The EMX4i can be programmed with two separate starting and stopping profiles. This allows the soft starter to control the motor in two different starting and stopping configurations.

The secondary motor set is ideal for dual winding (Dahlander) motors, multi-motor applications, or situations where the motor may start in two different conditions (such as loaded and unloaded conveyors).

The secondary motor set can also be used for duty/standby applications.

**NOTE**

For duty/standby applications, set parameter 6Q *Motor Overtemperature* to Log Only and install temperature protection for each motor.

To use the secondary motor set, a programmable input must be set to 'Motor Set Select' and the input must be closed when a start command is given (refer to 7A *Input A Function* and 7E *Input B Function*). The EMX4i checks which motor set to use at a start, and will use that motor set for the entire start/stop cycle.
9. Programmable Parameters

9.1 Main Menu
The main menu lets you view and change programmable parameters that control how the EMX4i operates.

To open the main menu, press the MENU button then scroll to Main Menu and press MENU again.

NOTE
Parameters for smart card functions are only visible in the parameter list if the smart card is installed.

9.2 Altering Parameter Values
To change a parameter value:
- scroll to the appropriate parameter in the main menu and press ▶ to enter edit mode.
- to alter the parameter setting, use the ▲ and ▼ buttons. Pressing ▲ or ▼ once will increase or decrease the value by one unit. If the button is held for longer than five seconds, the value will increase or decrease at a faster rate.
- to save changes, press STORE. The setting shown on the display will be saved and the keypad will return to the parameter list.
- to cancel changes, press EXIT. The keypad will ask for confirmation, then return to the parameter list without saving changes.

9.3 Adjustment Lock
You can prevent users from altering parameter settings by turning on the adjustment lock (parameter 10G Adjustment Lock).

If a user attempts to change a parameter value when the adjustment lock is active, an error message is displayed:

<table>
<thead>
<tr>
<th>Access Denied</th>
</tr>
</thead>
<tbody>
<tr>
<td>Adj Lock is On</td>
</tr>
</tbody>
</table>

9.5 1 Motor Details

1A – Command Source

**Options:**
- **Digital Input** (default)
  - The EMX4i will accept start and stop commands from the digital inputs.
- **Network**
  - The EMX4i will accept start and stop commands from the communication expansion card.
- **Remote Keypad**
  - The EMX4i will accept start and stop commands from the Remote Keypad.
- **Clock**
  - The EMX4i will start and stop as scheduled in parameters 4D to 4X.
- **Smart Card**
  - The EMX4i will accept start and stop commands from the smart card.
- **Smart Card + Clock**
  - The EMX4i will accept start commands from the smart card if they are within the operating schedule set in parameters 4A to 4X. A stop command from the smart card will be accepted regardless of the schedule.
- **Timer**
  - After a start signal is received, the EMX4i will start and stop the motor according to the timers set in parameters 4B and 4C.

**Description:**
Selects the command source for controlling the soft starter.

1B – Motor Full Load Current

**Range:** Model dependent

**Description:**
Matches the starter to the connected motor's full load current. Set to the full load current (FLC) rating shown on the motor nameplate.

1C – Motor kW

**Range:** 0 - 9999 kW  
**Default:** 0

**Description:**
Sets the running power of the connected motor, in kilowatts. This setting is the basis for power reporting and protection.

**NOTE**
The motor nameplate may state different power ratings for different supply voltages or power connections. Ensure that the motor kW setting is accurate for the installation.

1D – Locked Rotor Time

**Range:** 0:01 - 2:00 (minutes:seconds)  
**Default:** 10 seconds

**Description:**
Sets the maximum length of time the motor can sustain locked rotor current from cold before reaching its maximum temperature. Set according to the motor datasheet.
1E – *Locked Rotor Current*

**Range:** 400% - 1200% FLC  
**Default:** 600%

**Description:** Sets the locked rotor current of the connected motor, as a percentage of full load current. Set according to the motor datasheet.

1F – *Motor Service Factor*

**Range:** 100% - 130%  
**Default:** 105%

**Description:** Sets the motor service factor used by the thermal model. If the motor runs at full load current, it will reach 100%. Set according to the motor datasheet.

**NOTE**
Parameters 1D, 1E and 1F determine the trip current for motor overload protection. The default settings of parameters 1D, 1E and 1F provide Motor Overload Protection: Class 10, Trip Current 105% of FLA (full load amperage) or equivalent.

1G – *Reserved*

**Description:** This parameter is reserved for future use.

9.6 2 Motor Start/Stop

2A – *Start Mode*

**Options:** Constant Current (default)  
Adaptive Control

**Description:** Selects the soft start mode.

**NOTE**
The EMX4i will apply the current limit on all soft starts, including adaptive control. If the current limit is too low or the start ramp time (parameter 2B) is too short, the motor may not start successfully.

2B – *Start Ramp Time*

**Range:** 0:01 - 3:00 (minutes:seconds)  
**Default:** 10 seconds

**Description:** Sets the total start time for an Adaptive Control start or the ramp time for current ramp starting (from the initial current to the current limit).

2C – *Initial Current*

**Range:** 100% - 600% FLC  
**Default:** 200%

**Description:** Sets the initial start current level for current ramp starting, as a percentage of motor full load current. Set so that the motor begins to accelerate immediately after a start is initiated. If current ramp starting is not required, set the initial current equal to the current limit.
2D – **Current Limit**

Range: 100% - 600% FLC  
Default: 350%  
Description: Sets the current limit for constant current and current ramp soft starting, as a percentage of motor full load current.

2E – **Adaptive Start Profile**

Options: Early Acceleration  
Constant Acceleration (default)  
Late Acceleration  
Description: Selects which profile the EMX4i will use for an Adaptive Control soft start.

**NOTE**  
The EMX4i will apply the current limit on all soft starts, including adaptive control. If the current limit is too low or the start ramp time (parameter 2B) is too short, the motor may not start successfully.

2F – **Kickstart Time**

Range: 0 – 2000 milliseconds  
Default: 0000 milliseconds  
Description: Sets the kickstart duration. A setting of 0 disables kickstart.

2G – **Kickstart Level**

Range: 100% - 700% FLC  
Default: 500%  
Description: Sets the level of the kickstart current.

**CAUTION**  
Kickstart subjects the mechanical equipment to increased torque levels. Ensure the motor, load and couplings can handle the additional torque before using this feature.

2H – **Jog Torque**

The EMX4i can jog the motor at a reduced speed, which allows precise positioning of belts and flywheels. Jog can be used for either forward or reverse operation.

Range: 20% - 100%  
Default: 50%  
Description: Sets the current limit for jog operation.

2I – **Stop Mode**

Options: Coast To Stop  
TVR Soft Stop (default)  
Adaptive Control  
DC Brake  
Soft Brake  
Description: Selects the stop mode.
**PROGRAMMABLE PARAMETERS**

**2J – Stop Time**
- **Range:** 0:00 - 4:00 (minutes:seconds)
- **Default:** 0 second
- **Description:** Sets the time for soft stopping the motor using timed voltage ramp or Adaptive Control.
  
  If a main contactor is installed, the contactor must remain closed until the end of the stop time. Use the main contactor output (33, 34) to control the main contactor.

**2K – Adaptive Stop Profile**
- **Options:**
  - Early Deceleration
  - Constant Deceleration (default)
  - Late Deceleration
- **Description:** Selects which profile the EMX4i will use for an Adaptive Control soft stop.

**2L – Adaptive Control Gain**
- **Range:** 1% - 200%
- **Default:** 75%
- **Description:** Adjusts the performance of Adaptive Control. This setting affects both starting and stopping control.

**2M – Multi Pump**
- **Options:**
  - Single Pump (default)
  - Manifold Pump
- **Description:** Adjusts the performance of adaptive control to suit installations with multiple pumps connected to a common outlet manifold.

**2N – Start Delay**
- **Range:** 0:00 - 60:00 (minutes:seconds)
- **Default:** 0 second
- **Description:** Sets a delay after the starter receives a start command, before it starts the motor.

**2O – DC Brake Torque**
- **Range:** 20% - 100%
- **Default:** 20%
- **Description:** Sets the amount of brake torque the EMX4i will use to slow the motor.

**2P – DC Brake Time**
- **Range:** 0:01 - 0:30 (minutes:seconds)
- **Default:** 1 second
- **Description:** Sets the duration for DC injection during a braking stop.

**2Q – Brake Current Limit**
- **Range:** 100% - 600% FLC
- **Default:** 250%
- **Description:** Sets the current limit for soft brake.
2R – **Soft Brake Delay**

**Range:** 400 - 2000 milliseconds  
**Default:** 400 milliseconds  
**Description:** Sets the time the soft starter will wait after a stop signal is received, before it begins to supply braking current to the motor. Set to allow time for K1 and K2 to switch.

### 9.7 3 Motor Start/Stop-2

The parameters in this group control the operation of the secondary configuration of the motor. Use the programmable input to select the active motor set. Refer to *Secondary Motor Set* on page 60 for details.

#### 3A – **Motor Full Load Current-2**

**Range:** Model dependent  
**Description:** Sets the secondary motor's full load current.

#### 3B – **Motor kW-2**

**Range:** 0 - 9999 kW  
**Default:** 0  
**Description:** Sets the running power of the secondary motor, in kilowatts.

#### 3C – **Start Mode-2**

**Options:** Constant Current (default)  
Adaptive Control  
**Description:** Selects the soft start mode.

#### 3D – **Start Ramp Time-2**

**Range:** 0:01 - 3:00 (minutes:seconds)  
**Default:** 10 seconds  
**Description:** Sets the total start time for an Adaptive Control start or the ramp time for current ramp starting (from the initial current to the current limit).

#### 3E – **Initial Current-2**

**Range:** 100% - 600% FLC  
**Default:** 200%  
**Description:** Sets the initial start current level for current ramp starting, as a percentage of motor full load current. Set so that the motor begins to accelerate immediately after a start is initiated. If current ramp starting is not required, set the initial current equal to the current limit.

#### 3F – **Current Limit-2**

**Range:** 100% - 600% FLC  
**Default:** 350%  
**Description:** Sets the current limit for constant current and current ramp soft starting, as a percentage of motor full load current.

![NOTE]

The EMX4i will apply the current limit on all soft starts, including adaptive control. If the current limit is too low or the start ramp time (parameter 2B) is too short, the motor may not start successfully.
3G – Adaptive Start Profile-2
Options: Early Acceleration
         Constant Acceleration (default)
         Late Acceleration
Description: Selects which profile the EMX4i will use for an Adaptive Control soft start.

3H – Kickstart Time-2
Range: 0 – 2000 milliseconds   Default: 0000 milliseconds
Description: Sets the kickstart duration. A setting of 0 disables kickstart.

3I – Kickstart Level-2
Range: 100% - 700% FLC    Default: 500%
Description: Sets the level of the kickstart current.

3J – Jog Torque-2
Range: 20% - 100%    Default: 50%
Description: Sets the current limit for jog operation.

3K – Stop Mode-2
Options: Coast To Stop
         DC Brake
         TVR Soft Stop (default)
         Soft Brake
         Adaptive Control
Description: Selects the stop mode.

3L – Stop Time-2
Range: 0:00 - 4:00 (minutes:seconds)    Default: 0 second
Description: Sets the time for soft stopping the motor using timed voltage ramp or Adaptive Control.
If a main contactor is installed, the contactor must remain closed until the end of the stop time. Use the main contactor output (33, 34) to control the main contactor.

3M – Adaptive Stop Profile-2
Options: Early Deceleration
         Constant Deceleration (default)
         Late Deceleration
Description: Selects which profile the EMX4i will use for an Adaptive Control soft stop.

3N – Adaptive Control Gain-2
Range: 1%~200%    Default: 75%
Description: Adjusts the performance of Adaptive Control. This setting affects both starting and stopping control.
3O – Multi Pump-2
Options: Single Pump (default)
        Manifold Pump
Description: Adjusts the performance of adaptive control to suit installations
            with multiple pumps connected to a common outlet manifold.

3P – Start Delay-2
Range: 0:00 - 60:00 (minutes:seconds)  Default: 0 second
Description: Sets a delay after the starter receives a start command, before it
            starts the motor.

3Q – DC Brake Torque-2
Range: 20% - 100%  Default: 20%
Description: Sets the amount of brake torque the EMX4i will use to slow the
            motor.

3R – DC Brake Time-2
Range: 0:01 - 0:30 (minutes:seconds)  Default: 1 second
Description: Sets the duration for DC injection during a braking stop.

3S – Brake Current Limit-2
Range: 100% - 600% FLC  Default: 250%
Description: Sets the current limit for soft brake.

3T – Soft Brake Delay-2
Range: 400 - 2000 milliseconds  Default: 400 milliseconds
Description: Sets the time the soft starter will wait after a stop signal is
            received, before it begins to supply braking current to the motor.
            Set to allow time for K1 and K2 to switch.

9.8 4 Auto-Start/Stop
The EMX4i can be configured to automatically start and/or stop the motor at a
particular time, or run it in cycles of a specified duration.

4A – Auto-Start/Stop Mode
Options: Disable (default)  Enable Timer Mode
        Enable Clock Mode
Description: Enable or disable auto-start/stop operation.

4B – Run Time
Range: 00:00 - 23:59 hh:mm  Default: 00:00
Description: Sets the duration for the starter to run, after a timer mode auto-
            start.
PROGRAMMABLE PARAMETERS

4C – Stopped Time
Range: 00:00 - 23:59 hh:mm  Default: 00:00
Description: Sets the duration for the starter to remain stopped, when operating in timer mode.

4D – Sunday Mode
Options:
- Start/Stop
- Disable (default)
- Start Only
- Enable
- Stop Only
- Enable
- Start/Stop
- Enable

Description: Enables or disables auto-start/stop for Sunday.

4E – Sunday Start Time
Range: 00:00 - 23:59  Default: 00:00
Description: Sets the auto-start time for Sunday (24 hour format).

4F – Sunday Stop Time
Range: 00:00 - 23:59  Default: 00:00
Description: Sets the auto-stop time for Sunday (24 hour format).

4G – Monday Mode
Options:
- Start/Stop Disable (default)
- Start Only Enable
- Stop Only Enable
- Start/Stop Enable

Description: Enables or disables auto-start/stop for Monday.

4H – Monday Start Time
Range: 00:00 - 23:59  Default: 00:00
Description: Sets the auto-start time for Monday (24 hour format).

4I – Monday Stop Time
Range: 00:00 - 23:59  Default: 00:00
Description: Sets the auto-stop time for Monday (24 hour format).

4J – Tuesday Mode
Options:
- Start/Stop Disable (default)
- Start Only Enable
- Stop Only Enable
- Start/Stop Enable

Description: Enables or disables auto-start/stop for Tuesday.

4K – Tuesday Start Time
Range: 00:00 - 23:59  Default: 00:00
Description: Sets the auto-start time for Tuesday (24 hour format).
4L – **Tuesday Stop Time**

**Range:** 00:00 - 23:59  
**Default:** 00:00  
**Description:** Sets the auto-stop time for Tuesday (24 hour format).

4M – **Wednesday Mode**

**Options:**  
- Start/Stop Disable (default)  
- Stop Only Enable  
- Start Only Enable  
- Start/Stop Enable  

**Description:** Enables or disables auto-start/stop for Wednesday.

4N – **Wednesday Start Time**

**Range:** 00:00 - 23:59  
**Default:** 00:00  
**Description:** Sets the auto-start time for Wednesday (24 hour format).

4O – **Wednesday Stop Time**

**Range:** 00:00 - 23:59  
**Default:** 00:00  
**Description:** Sets the auto-stop time for Wednesday (24 hour format).

4P – **Thursday Mode**

**Options:**  
- Start/Stop Disable (default)  
- Stop Only Enable  
- Start Only Enable  
- Start/Stop Enable  

**Description:** Enables or disables auto-start/stop for Thursday.

4Q – **Thursday Start Time**

**Range:** 00:00 - 23:59  
**Default:** 00:00  
**Description:** Sets the auto-start time for Thursday (24 hour format).

4R – **Thursday Stop Time**

**Range:** 00:00 - 23:59  
**Default:** 00:00  
**Description:** Sets the auto-stop time for Thursday (24 hour format).

4S – **Friday Mode**

**Options:**  
- Start/Stop Disable (default)  
- Stop Only Enable  
- Start Only Enable  
- Start/Stop Enable  

**Description:** Enables or disables auto-start/stop for Friday.

4T – **Friday Start Time**

**Range:** 00:00 - 23:59  
**Default:** 00:00  
**Description:** Sets the auto-start time for Friday (24 hour format).

4U – **Friday Stop Time**

**Range:** 00:00 - 23:59  
**Default:** 00:00  
**Description:** Sets the auto-stop time for Friday (24 hour format).

4V – **Saturday Mode**

**Options:**  
- Start/Stop Disable (default)  
- Stop Only Enable  
- Start Only Enable  
- Start/Stop Enable  

**Description:** Enables or disables auto-start/stop for Saturday.
PROGRAMMABLE PARAMETERS

4W – Saturday Start Time
Range: 00:00 - 23:59 Default: 00:00
Description: Sets the auto-start time for Saturday (24 hour format).

4X – Saturday Stop Time
Range: 00:00 - 23:59 Default: 00:00
Description: Sets the auto-stop time for Saturday (24 hour format).

9.9 5 Protection Levels

5A – Current Imbalance
Range: 10% - 50% Default: 30%
Description: Sets the trip point for current imbalance protection.

5B – Current Imbalance Delay
Range: 0:00 - 4:00 (minutes:seconds) Default: 3 seconds
Description: Slows the EMX4i’s response to current imbalance, avoiding trips due to momentary fluctuations.

5C – Undercurrent
Range: 0% - 100% Default: 20%
Description: Sets the trip point for undercurrent protection, as a percentage of motor full load current. Set to a level between the motor’s normal working range and the motor’s magnetising (no load) current (typically 25% to 35% of full load current). A setting of 0% disables undercurrent protection.

5D – Undercurrent Delay
Range: 0:00 - 4:00 (minutes:seconds) Default: 5 seconds
Description: Slows the EMX4i’s response to undercurrent, avoiding trips due to momentary fluctuations.

5E – Overcurrent
Range: 80% - 600% Default: 400%
Description: Sets the trip point for overcurrent protection, as a percentage of motor full load current.

5F – Overcurrent Delay
Range: 0:00 - 1:00 (minutes:seconds) Default: 0 second
Description: Slows the EMX4i’s response to overcurrent, avoiding trips due to momentary overcurrent events.

5G – Undervoltage
Range: 100 - 1000 V Default: 350
Description: Sets the trip point for undervoltage protection. Set as required.

NOTE
Voltage protections will not operate correctly until the starter is in Run mode.
5H – *Undervoltage Delay*

**Range:** 0:00 - 1:00 (minutes:seconds)  
**Default:** 1 second  
**Description:** Slows the EMX4i’s response to undervoltage, avoiding trips due to momentary fluctuations.

5I – *Overvoltage*

**Range:** 100 - 1000 V  
**Default:** 500  
**Description:** Sets the trip point for overvoltage protection. Set as required.

5J – *Overvoltage Delay*

**Range:** 0:00 - 1:00 (minutes:seconds)  
**Default:** 1 second  
**Description:** Slows the EMX4i’s response to overvoltage, avoiding trips due to momentary fluctuations.

5K – *Underpower*

**Range:** 10% -120%  
**Default:** 10%  
**Description:** Sets the trip point for underpower protection. Set as required.

5L – *Underpower Delay*

**Range:** 0:01 - 1:00 (minutes:seconds)  
**Default:** 1 second  
**Description:** Slows the EMX4i’s response to underpower, avoiding trips due to momentary fluctuations.

5M – *Overpower*

**Range:** 80% -200%  
**Default:** 150%  
**Description:** Sets the trip point for overpower protection. Set as required.

5N – *Overpower Delay*

**Range:** 0:01 - 1:00 (minutes:seconds)  
**Default:** 1 second  
**Description:** Slows the EMX4i’s response to overpower, avoiding trips due to momentary fluctuations.

5O – *Excess Start Time*

**Range:** 0:00 - 4:00 (minutes:seconds)  
**Default:** 20 seconds  
**Description:** Excess start time is the maximum time the EMX4i will attempt to start the motor. If the motor does not transition to Run mode within the programmed limit, the starter will trip. Set for a period slightly longer than required for a normal healthy start. A setting of 0 disables excess start time protection.

5P – *Restart Delay*

**Range:** 00:01 - 60:00 (minutes:seconds)  
**Default:** 10 seconds  
**Description:** The EMX4i can be configured to force a delay between the end of a stop and the beginning of the next start. During the restart delay period, the display shows the time remaining before another start can be attempted.
PROGRAMMABLE PARAMETERS

5Q – Starts per Hour
Range: 0 - 10 Default: 0
Description: Sets the maximum number of starts the EMX4i will attempt in a 60 minute period. A setting of 0 disables this protection.

5R – Phase Sequence
Options: Any Sequence (default) Positive Only Negative Only
Description: Selects which phase sequences the soft starter will allow at a start. During its pre-start checks, the starter examines the sequence of the phases at its input terminals and trips if the actual sequence does not match the selected option.

⚠️ CAUTION
When using DC brake, the mains supply must be connected to the soft starter (input terminals L1, L2, L3) in positive phase sequence and parameter 5R Phase Sequence must be set to Positive Only.

9.10 6 Protection Action

6A – Auto-Reset Count
Range: 0 – 5 Default: 0
Description: Sets how many times the soft starter will auto-reset, if it continues to trip.

The reset counter increases by one each time the soft starter auto-resets, and resets after a successful start.

Setting 6A to zero disables auto-reset.

6B – Auto-Reset Delay
Range: 0:05 - 15:00 (minutes:seconds) Default: 5 seconds
Description: Sets a delay before the soft starter will auto-reset a trip.

6C – Current Imbalance
Options: Soft Trip and Log (default) The soft starter will stop the motor as selected in parameter 2I or 3K Stop Mode, then enter trip state. The trip must be reset before the EMX4i can restart.

Soft Trip and Reset The soft starter will stop the motor as selected in parameter 2I or 3K Stop Mode, then enter trip state. The trip will reset after the auto-reset delay

Trip Starter The soft starter will remove power and the motor will coast to stop. The trip must be reset before the EMX4i can restart.
**Programmable Parameters**

**Trip and Reset**  
The soft starter will remove power and the motor will coast to stop. The trip will reset after the auto-reset delay.

**Warn and Log**  
The protection will be written to the event log and the display will show a warning message, but the soft starter will continue to operate.

**Log Only**  
The protection will be written to the event log but the soft starter will continue to operate.

**Description:**  
Selects the soft starter's response to each protection. All protection events are written to the event log.

**6D – Undercurrent**

**Options:**  
- Soft Trip and Log (default)
- Soft Trip and Reset
- Trip Starter

**Description:**  
Selects the soft starter's response to the protection event.

**6E – Overcurrent**

**Options:**  
- Soft Trip and Log (default)
- Soft Trip and Reset
- Trip Starter

**Description:**  
Selects the soft starter's response to the protection event.

**6F – Undervoltage**

**Options:**  
- Soft Trip and Log (default)
- Soft Trip and Reset
- Trip Starter

**Description:**  
Selects the soft starter's response to the protection event.

**6G – Overvoltage**

**Options:**  
- Soft Trip and Log (default)
- Soft Trip and Reset
- Trip Starter

**Description:**  
Selects the soft starter's response to the protection event.

**6H – Underpower**

**Options:**  
- Log Only (default)
- Soft Trip and Log
- Soft Trip and Reset

**Description:**  
Selects the soft starter's response to the protection event.

**6I – Overpower**

**Options:**  
- Log Only (default)
- Soft Trip and Log
- Soft Trip and Reset

**Description:**  
Selects the soft starter's response to the protection event.
PROGRAMMABLE PARAMETERS

6J – *Excess Start Time*
Options:  
- Soft Trip and Log (default)  Trip and Reset  
- Soft Trip and Reset  Warn and Log  
- Trip Starter  Log Only  
Description:  Selects the soft starter's response to the protection event.

6K – *Input A Trip*
Options:  
- Soft Trip and Log (default)  Trip and Reset  
- Soft Trip and Reset  Warn and Log  
- Trip Starter  Log Only  
Description:  Selects the soft starter's response to the protection event.

6L – *Input B Trip*
Options:  
- Soft Trip and Log (default)  Trip and Reset  
- Soft Trip and Reset  Warn and Log  
- Trip Starter  Log Only  
Description:  Selects the soft starter's response to the protection event.

6M – *Network Communications*
Options:  
- Soft Trip and Log (default)  Warn and Log  
- Soft Trip and Reset  Log Only  
- Trip Starter  Stop  
- Trip and Reset  
Description:  Selects the soft starter's response to the protection event. If set to Stop, the EMX4i will perform a soft stop, then can be restarted without a reset.

6N – *Remote Keypad Fault*
Options:  
- Soft Trip and Log (default)  Trip and Reset  
- Soft Trip and Reset  Warn and Log  
- Trip Starter  Log Only  
Description:  Selects the soft starter's response to the protection event.

6O – *Frequency*
Options:  
- Soft Trip and Log (default)  Trip and Reset  
- Soft Trip and Reset  Warn and Log  
- Trip Starter  Log Only  
Description:  Selects the soft starter's response to the protection event.

6P – *Phase Sequence*
Options:  
- Soft Trip and Log (default)  Trip and Reset  
- Soft Trip and Reset  Warn and Log  
- Trip Starter  Log Only  
Description:  Selects the soft starter's response to the protection event.
### 6Q – Motor Overtemperature

**Options:**
- Soft Trip and Log (default)
- Soft Trip and Reset
- Trip Starter

**Description:**
Selects the soft starter's response to the protection event.

### 6R – Motor Thermistor Circuit

**Options:**
- Soft Trip and Log (default)
- Soft Trip and Reset
- Trip Starter

**Description:**
Selects the soft starter's response to the protection event.

### 6S – Shorted SCR Action

**Options:**
- 3-Phase Control Only (default)
- PowerThrough

**Description:**
Selects whether the soft starter will allow PowerThrough operation, if the soft starter is damaged on one phase. The soft starter will use two-phase control, allowing the motor to continue operating in critical applications. Refer to *PowerThrough* on page 47 for further information.

### 6T – Battery/Clock

**Options:**
- Soft Trip and Log (default)
- Soft Trip and Reset
- Trip Starter

**Description:**
Selects the soft starter's response to the protection event.

### 9.11 7 Inputs

#### 7A – Input A Function

**Options:**
- Command
- Override: Network
- Command
- Override: Digital
- Command
- Override: Keypad
- Input Trip (N/O) (default)
- Input Trip (N/C)
- Emergency Mode

**Description:**
- A closed circuit across 13, 14 trips the soft starter.
- A closed circuit across 13, 14 activates emergency mode. When the EMX4i receives a start command, it will continue to run until a stop command is received, ignoring all trips and warnings.
**PROGRAMMABLE PARAMETERS**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Jog Forward</td>
<td>Activates jog operation in a forward direction.</td>
</tr>
<tr>
<td>Jog Reverse</td>
<td>Activates jog operation in reverse direction.</td>
</tr>
<tr>
<td>Zero Speed Sensor</td>
<td>An open circuit across 13, 14 indicates to the soft starter that the motor has reached a standstill. The soft starter requires a normally open zero speed sensor.</td>
</tr>
<tr>
<td>Motor Set Select</td>
<td>A closed circuit across 13, 14 instructs the starter to use the secondary motor configuration for the next start/stop cycle.</td>
</tr>
<tr>
<td>Reverse Direction</td>
<td>A closed circuit across 13, 14 instructs the starter to reverse the phase sequence for the next start.</td>
</tr>
<tr>
<td>Pump Clean</td>
<td>Activates the pump clean function.</td>
</tr>
</tbody>
</table>

**Description:**
Selects the function of Input A.

**7B – Input A Trip**

**Options:**
- Always Active: A trip can occur at any time when the soft starter is receiving power.
- Operating Only (default): A trip can occur while the soft starter is running, stopping or starting.
- Run Only: A trip can only occur while the soft starter is running.

**Description:**
Selects when an input trip can occur.

**7C – Input A Trip Delay**

**Range:** 0:00 - 4:00 (minutes:seconds)  **Default:** 0 second

**Description:**
Sets a delay between the input activating and the soft starter tripping.

**7D – Input A Initial Delay**

**Range:** 00:00 - 30:00 (minutes:seconds)  **Default:** 0 second

**Description:**
Sets a delay before an input trip can occur. The initial delay is counted from the time a start signal is received. The state of the input is ignored until the initial delay has elapsed.

**7E – Input B Function**

**Options:**
- Input Trip (N/O) (default)
- Input Trip (N/C)
- Emergency Mode
- Jog Forward
- Jog Reverse
- Zero Speed Sensor
- Motor Set Select
- Reverse Direction
- Pump Clean

**Description:**
Selects the function of Input B. Refer to parameter 7A *Input A Function* for details.
7F – Input B Trip
Options: Always Active
Operating Only (default)
Run Only
Description: Selects when an input trip can occur.

7G – Input B Trip Delay
Range: 0:00 - 4:00 (minutes:seconds) Default: 0 second
Description: Sets a delay between the input activating and the soft starter tripping.

7H – Input B Initial Delay
Range: 00:00 - 30:00 (minutes:seconds) Default: 0 second
Description: Sets a delay before an input trip can occur. The initial delay is counted from the time a start signal is received. The state of the input is ignored until the initial delay has elapsed.

7I – Reset/Enable Logic
Options: Normally Closed (default)
Normally Open
Description: Selects whether the reset input (10, 11) is normally open or normally closed.

NOTE
If the reset input is active, the starter will not operate.

7J – Input A Name
Options: Input A Trip (default) Controller
Low Pressure PLC
High Pressure Vibration Alarm
Pump Fault Field Trip
Low Level Interlock Trip
High Level Motor Temperature
No Flow Motor Protection
Starter Disable Feeder Protection
Starter Disable Custom Message
Description: Selects a message for the keypad to display when Input A is active.
The custom message can be loaded via the USB port. Refer to USB Save & Load on page 36 for details.
### PROGRAMMABLE PARAMETERS

</tr>
</tbody>
</table>

**Description:** Selects the function of Relay A. Relay A is a changeover relay.
8B – Relay A On Delay
Range: 0:00 - 5:00 (minutes:seconds)  Default: 0 second
Description: Sets the delay for changing the state of Relay A.

8C – Relay A Off Delay
Range: 0:00 - 5:00 (minutes:seconds)  Default: 0 second
Description: Sets the delay for changing the state of Relay A.

8D – Relay B Function
Options: Off  Low Current Flag
         Ready  High Current Flag
         Run (default)  Motor Temperature Flag
         Warning  Soft Brake Relay
         Trip  Reversing Contactor
Description: Selects the function of Relay B (normally open). Refer to parameter 8A Relay A Function for details.

8E – Relay B On Delay
Range: 0:00 - 5:00 (minutes:seconds)  Default: 0 second
Description: Sets the delay for closing Relay B.

8F – Relay B Off Delay
Range: 0:00 - 5:00 (minutes:seconds)  Default: 0 second
Description: Sets the delay for re-opening Relay B.

8G – Low Current Flag
The EMX4i has low and high current flags to give early warning of abnormal operation. The current flags can be configured to indicate an abnormal current level during operation, between the normal operating level and the undercurrent or instantaneous overcurrent trip levels. The flags can signal the situation to external equipment via one of the programmable outputs.

The flags clear when the current returns within the normal operating range by 10% of the programmed flag value.
Range: 1% - 100% FLC  Default: 50%
Description: Sets the level at which the low current flag operates, as a percentage of motor full load current.

8H – High Current Flag
Range: 50% - 600% FLC  Default: 100%
Description: Sets the level at which the high current flag operates, as a percentage of motor full load current.
PROGRAMMABLE PARAMETERS

8I – Motor Temperature Flag
The EMX4i has a motor temperature flag to give early warning of abnormal operation. The flag can indicate that the motor is operating above its normal operating temperature but lower than the overload limit. The flag can signal the situation to external equipment via one of the programmable outputs.

Range: 0% - 160%  
Default: 80%

Description: Sets the level at which the motor temperature flag operates, as a percentage of the motor's thermal capacity.

8J – Main Contactor Time
Range: 100 – 2000 milliseconds  
Default: 400 milliseconds

Description: Sets the delay period between the starter switching the main contactor output (terminals 33, 34) and beginning the pre-start checks (before a start) or entering the not ready state (after a stop). Set according to the specifications of the main contactor used.

9.13 9 Analog Output

9A – Analog Output A
Options: Current (% FLC) (default)  
Motor Temperature (%)  
Motor pf  
Motor Power (%kW)  
Heatsink Temperature (°C)

Description: Selects which information will be reported via the analog output.

9B – Analog A Scale
Range: 0-20 mA  
4-20 mA (default)

Description: Selects the range of the analog output.

9C – Analog A Maximum Adjustment
Range: 0% - 600%  
Default: 100%

Description: Calibrates the upper limit of the analog output to match the signal measured on an external current measuring device.
9D – Analog A Minimum Adjustment
Range: 0% - 600%  
Default: 0%
Description: Calibrates the lower limit of the analog output to match the signal measured on an external current measuring device.

9.14 10 Display
10A – Language
Options: English (default)  Português
Chinese  Français
Español  Italiano
Deutsch  Russian
Description: Selects which language the keypad will use to display messages and feedback.

10B – Temperature Scale
Options: Celsius (default)
Fahrenheit
Description: Selects whether the EMX4i will display temperatures in degrees Celsius or Fahrenheit.

10C – Graph Timebase
Options: 30 seconds (default)
1 minute
30 minutes
1 hour
Description: Sets the graph time scale. The graph will progressively replace the old data with new data.

10D – Graph Maximum Adjustment
Range: 0% – 600%  
Default: 400%
Description: Adjusts the upper limit of the performance graph.

10E – Graph Minimum Adjustment
Range: 0% – 600%  
Default: 0%
Description: Adjusts the lower limit of the performance graph.

10F – Current Calibration
Range: 85% - 115%  
Default: 100%
Description: Calibrates the soft starter’s current monitoring circuits to match an external current metering device.
Use the following formula to determine the necessary adjustment:
\[
\text{Calibration} \, (\%) = \frac{\text{Current shown on EMX4i display}}{\text{Current measured by external device}}
\]
**PROGRAMMABLE PARAMETERS**

### 10G – Adjustment Lock

**Options:**
- **Read & Write (default)**: Allows users to alter parameter values in the main menu.
- **Read Only**: Prevents users altering parameter values in the main menu. Parameter values can still be viewed.

**Description:**
Selects whether the keypad will allow parameters to be changed via the main menu.

### 10H – User Parameter 1

**Options:**
- **Blank**: Displays no data in the selected area, allowing long messages to be shown without overlapping.
- **Current (default)**: Average rms current across all three phases.
- **Motor Voltage**: Average rms voltage across all three phases.
- **P1 Voltage**: Phase 1 voltage.
- **P2 Voltage**: Phase 2 voltage.
- **P3 Voltage**: Phase 3 voltage.
- **Mains Frequency**: The average frequency measured on three phases.
- **Motor pf**: The motor's power factor, measured by the soft starter.
- **Motor Power**: The motor's running power in kilowatts.
- **Motor Temperature (%)**: The motor's temperature, calculated by the thermal model.
- **Hours Run**: The number of hours the motor has run via the soft starter.
- **Number of Starts**: The number of starts the EMX4i has completed since the start counter was last reset.
- **Pump Pressure**: The pressure at the pump, as configured in parameters 30B~30D. This information is only available if the smart card is installed.
- **Pump Flow**: The flow at the pump, as configured in parameters 30F~30K. This information is only available if the smart card is installed.
- **Well Depth**: The depth of the well, as configured in parameters 30M~30O. This information is only available if the smart card is installed.
- **Pump Temperature**: The pump temperature, as measured by the PT100. This information is only available if the smart card is installed.
- **Analog Output Value**: The value of the analog output (refer to parameters 9A~9D).
- **Heatsink Temperature**: The soft starter's temperature, measured at the heatsink.
Bypass Model (%)  The percentage of thermal capacity remaining in the bypass contactor.
SCR Temperature  The temperature of the SCRs, calculated by the thermal model.
Rating Capacity (%)  The thermal capacity available in the soft starter for its next start.

Description: Selects which information will be displayed on the main monitoring screen.

10I – User Parameter 2
Options: Refer to parameter 10H User Parameter 1 for details.
Default: Motor Voltage
Description: Selects which information will be displayed on the main monitoring screen. Refer to parameter 10H User Parameter 1 for details.

10J – User Parameter 3
Options: Refer to parameter 10H User Parameter 1 for details.
Default: Mains Frequency
Description: Selects which information will be displayed on the programmable monitoring screen. Refer to parameter 10H User Parameter 1 for details.

10K – User Parameter 4
Options: Refer to parameter 10H User Parameter 1 for details.
Default: Motor pf
Description: Selects which information will be displayed on the programmable monitoring screen. Refer to parameter 10H User Parameter 1 for details.

10L – User Parameter 5
Options: Refer to parameter 10H User Parameter 1 for details.
Default: Motor Power
Description: Selects which information will be displayed on the programmable monitoring screen. Refer to parameter 10H User Parameter 1 for details.

10M – User Parameter 6
Options: Refer to parameter 10H User Parameter 1 for details.
Default: Motor Temp (%)
Description: Selects which information will be displayed on the programmable monitoring screen. Refer to parameter 10H User Parameter 1 for details.
## 9.15 11 Pump Clean

### 11A – Reverse Torque

- **Range:** 20% - 100%
- **Default:** 20%
- **Description:** Sets the torque level for reverse jog operation during pump clean.

### 11B – Reverse Time

- **Range:** 0:00 - 1:00 (minutes:seconds)
- **Default:** 10 seconds
- **Description:** Sets the time for the starter to operate in reverse jog during a pump clean cycle.

### 11C – Forward Current Limit

- **Range:** 100% - 600% FLC
- **Default:** 100%
- **Description:** Sets the current limit for forward start operation during pump clean.

### 11D – Forward Time

- **Range:** 0:00 - 1:00 (minutes:seconds)
- **Default:** 10 seconds
- **Description:** Sets the time for the starter to run the motor after a forward start, during a pump clean cycle.

### 11E – Pump Stop Mode

- **Options:**
  - Coast To Stop (default)
  - TVR Soft Stop
- **Description:** Selects the stop mode for pump clean.

### 11F – Pump Stop Time

- **Range:** 0:00 - 1:00 (minutes:seconds)
- **Default:** 10 seconds
- **Description:** Sets the stopping time for the starter during a pump clean cycle.

### 11G – Pump Clean Cycles

- **Range:** 1 – 5
- **Default:** 1
- **Description:** Sets how many times the soft starter will repeat the pump clean cycle.
9.16 12 Communications Card

12A – Modbus Address
Range: 1 - 254  Default: 1
Description: Sets the Modbus RTU network address for the soft starter.

12B – Modbus Baud Rate
Options: 4800
9600 (default)
19200
38400
Description: Selects the baud rate for Modbus RTU communications.

12C – Modbus Parity
Options: None (default)
Odd
Even
10-bit
Description: Selects the parity for Modbus RTU communications.

12D – Modbus Timeout
Options: Off (default)
10 seconds
60 seconds
100 seconds
Description: Selects the timeout for Modbus RTU communications.

12E – DeviceNet Address
Range: 0 - 63  Default: 0
Description: Sets the DeviceNet network address for the soft starter.

12F – DeviceNet Baud Rate
Options: 125 kB (default)
250 kB
500 kB
Description: Selects the baud rate for DeviceNet communications.

12G – Profibus Address
Range: 1 - 125  Default: 1
Description: Sets the Profibus network address for the soft starter.

12H – Gateway Address
Range: 0 - 255  Default: 192
Description: Sets the first component of the network gateway address. The gateway address is set using parameters 12H~12K and the default address is 192.168.0.100.
**PROGRAMMABLE PARAMETERS**

12I – *Gateway Address 2*
- **Range:** 0 - 255
- **Default:** 168
- **Description:** Sets the second component of the network gateway address.

12J – *Gateway Address 3*
- **Range:** 0 - 255
- **Default:** 0
- **Description:** Sets the third component of the network gateway address.

12K – *Gateway Address 4*
- **Range:** 0 - 255
- **Default:** 100
- **Description:** Sets the fourth component of the network gateway address.

**NOTE**
The network address can also be set via the Network Address options in the Setup Tools. Refer to *Network Address* on page 38 for details.

12L – *IP Address*
- **Range:** 0 - 255
- **Default:** 192
- **Description:** Sets the first component of the soft starter’s IP address, for Ethernet communications. The IP address is set using parameters 12L~12O and the default address is 192.168.0.2.

12M – *IP Address 2*
- **Range:** 0 - 255
- **Default:** 168
- **Description:** Sets the second component of the soft starter’s IP address, for Ethernet communications.

12N – *IP Address 3*
- **Range:** 0 - 255
- **Default:** 0
- **Description:** Sets the third component of the soft starter’s IP address, for Ethernet communications.

12O – *IP Address 4*
- **Range:** 0 - 255
- **Default:** 2
- **Description:** Sets the fourth component of the soft starter’s IP address, for Ethernet communications.

**NOTE**
The network address can also be set via the Network Address options in the Setup Tools. Refer to *Network Address* on page 38 for details.

12P – *Subnet Mask*
- **Range:** 0 - 255
- **Default:** 255
- **Description:** Sets the first component of the network subnet mask, for Ethernet communications. The subnet mask is set using parameters 12P~12S and the default mask is 255.255.255.0.
12Q – **Subnet Mask 2**

**Range:** 0 - 255  
**Default:** 255  
**Description:** Sets the second component of the network subnet mask, for Ethernet communications.

12R – **Subnet Mask 3**

**Range:** 0 - 255  
**Default:** 255  
**Description:** Sets the third component of the network subnet mask, for Ethernet communications.

12S – **Subnet Mask 4**

**Range:** 0 - 255  
**Default:** 0  
**Description:** Sets the fourth component of the network subnet mask, for Ethernet communications.

NOTE
The network address can also be set via the Network Address options in the Setup Tools. Refer to *Network Address* on page 38 for details.

12T – **DHCP**

**Options:** Disable (default)  
Enable  
**Description:** Selects whether the communications card will accept an IP address assigned by DHCP.

NOTE
DHCP addressing is available with Modbus TCP and Ethernet/IP. DHCP addressing is not supported with Profinet.

12U – **Location ID**

**Range:** 0 - 65535  
**Default:** 0  
**Description:** Sets the soft starter’s unique location ID.
9.17 20 Advanced

20A – Tracking Gain
Range: 1% - 200%  
Default: 50%
Description: Fine-tunes the behaviour of the adaptive control algorithm.

20B – Pedestal Detect
Range: 0% - 200%  
Default: 80%
Description: Adjusts the behaviour of the adaptive control algorithm for soft stop.

20C – Bypass Contactor Delay
Range: 100 – 2000 milliseconds  
Default: 150 milliseconds
Description: Sets the starter to match the bypass contactor closing/opening time. Set according to the specifications of the bypass contactor used. If this time is too short, the starter will trip.

20D – Model Rating
Range: 0020~0580  
Default: Model dependent
Description: The soft starter's internal model reference, as shown on the silver label on the side of the unit (1).

NOTE
This parameter can only be adjusted by authorised servicing agents.

20E – Screen Timeout
Options: 1 minute (default)  
2 minutes  
3 minutes
4 minutes  
5 minutes
Description: Sets the timeout for the menu to automatically close if no keypad activity is detected.

20F – Motor Connection
Options: Auto-detect (default)  
In-line  
Inside delta
Description: Selects whether the soft starter will automatically detect the format of the connection to the motor.
9.18 30 Pump Input Configuration

NOTE
The parameters in this group are only active if a smart card is installed.

30A – Pressure Sensor Type
Options: None (default)  
Switch  
Analog  
Description: Selects which type of sensor is associated with the pressure sensor input on the smart card.

30B – Pressure Units
Options: Bar  
kPa (default)  
Psi  
Description: Selects which units the sensor will use to report the measured pressure.

30C – Pressure at 4 mA
Range: 0 – 5000  
Default: 0  
Description: Calibrates the soft starter to the 4 mA (0%) level of the pressure sensor input.

30D – Pressure at 20 mA
Range: 0 – 5000  
Default: 0  
Description: Calibrates the soft starter to the 20 mA (100%) level of the pressure sensor input.

30E – Flow Sensor Type
Options: None (default)  
Switch  
Analog  
Description: Selects which type of sensor is associated with the flow sensor input on the smart card.

30F – Flow Units
Options: litres/second (default)  
litres/minute  
gallons/second  
gallons/minute  
Description: Selects which units the sensor will use to report the measured flow.
PROGRAMMABLE PARAMETERS

30G – Flow at 4 mA
Range: 0 – 5000
Default: 0
Description: Calibrates the soft starter to the 4 mA (0%) level of the flow sensor input.

30H – Flow at 20 mA
Range: 0 – 5000
Default: 0
Description: Calibrates the soft starter to the 20 mA (100%) level of the flow sensor input.

30I – Units per Minute at Max Flow
Range: 0 – 5000
Default: 0
Description: Calibrates the soft starter to the maximum flow volume of the flow sensor.

30J – Pulses per Minute at Max Flow
Range: 0 – 20000
Default: 0
Description: Calibrates the soft starter to the maximum flow volume of the flow sensor.

30K – Units per Pulse
Range: 0 – 1000
Default: 0
Description: Set to match how many units the flow sensor will measure for each pulse.

30L – Depth Sensor Type
Options: None (default)
Switch
Analog
Description: Selects which type of sensor is associated with the depth sensor input on the smart card.

30M – Depth Units
Options: metres (default)
feet
Description: Selects which units the sensor will use to report the measured depth.

30N – Depth at 4 mA
Range: 0 – 1000
Default: 0
Description: Calibrates the soft starter to the 4 mA (0%) level of the depth sensor input.

30O – Depth at 20 mA
Range: 0 – 1000
Default: 0
Description: Calibrates the soft starter to the 20 mA (100%) level of the depth sensor input.
9.19 31 Flow Protection

- **NOTE**
  The parameters in this group are only active if a smart card is installed.

Flow protection uses terminals B33, B34 or C23, C24 on the smart card.

**31A – High Flow Trip Level**
- **Range:** 0 – 5000
- **Default:** 10
- **Description:** Sets the trip point for high flow protection.

**31B – Low Flow Trip Level**
- **Range:** 1 – 5000
- **Default:** 5
- **Description:** Sets the trip point for low flow protection.

**31C – Flow Start Delay**
- **Range:** 00:00:50 - 30:00:00 mm:ss:ms
- **Default:** 00:00:500 ms
- **Description:** Sets a delay before a flow protection trip can occur. The delay is counted from the time a start signal is received. The flow level is ignored until the start delay has elapsed.

**31D – Flow Response Delay**
- **Range:** 00:00:10 - 30:00:00 mm:ss:ms
- **Default:** 00:00:500 ms
- **Description:** Sets a delay between the flow passing the high or low flow trip levels, and the soft starter tripping.

9.20 32 Pressure Protection

- **NOTE**
  The parameters in this group are only active if a smart card is installed.

Pressure protection uses terminals B23, B24 or C33, C34, C43, C44 on the smart card.

**32A – High Pressure Trip Level**
- **Range:** 0 – 5000
- **Default:** 10
- **Description:** Sets the trip point for high pressure protection.

**32B – High Pressure Start Delay**
- **Range:** 00:00:10 – 30:00:00 mm:ss:ms
- **Default:** 00:00:500 ms
- **Description:** Sets a delay before a high pressure protection trip can occur. The delay is counted from the time a start signal is received. The pressure is ignored until the start delay has elapsed.

**32C – High Pressure Response Delay**
- **Range:** 00:00:10 – 30:00:00 mm:ss:ms
- **Default:** 00:00:500 ms
- **Description:** Sets a delay between the pressure passing the high pressure trip level, and the soft starter tripping.
PROGRAMMABLE PARAMETERS

32D – Low Pressure Trip Level
Range: 0 – 5000  Default: 5
Description: Sets the trip point for low pressure protection.

32E – Low Pressure Start Delay
Range: 00:00:10 – 30:00:00 mm:ss:ms  Default: 00:00:500 ms
Description: Sets a delay before a low pressure protection trip can occur. The delay is counted from the time a start signal is received. The pressure is ignored until the start delay has elapsed.

32F – Low Pressure Response Delay
Range: 00:00:10 – 30:00:00 mm:ss:ms  Default: 00:00:500 ms
Description: Sets a delay between the pressure passing the low pressure trip level, and the soft starter tripping.

9.21 33 Pressure Control

NOTE
The parameters in this group are only active if a smart card is installed.

Pressure control uses terminals B23, B24 on the smart card. Use an analog 4-20 mA sensor.

33A – Pressure Control Mode
Options: Off (default)  The soft starter will not use the pressure sensor to control soft starting.
Falling Pressure Start  The soft starter will start when the pressure drops below the level selected in parameter 33B Start Pressure Level.
Rising Pressure Start  The soft starter will start when the pressure rises above the level selected in parameter 33B Start Pressure Level.

Description: Selects how the soft starter will use data from the pressure sensor to control the motor.

33B – Start Pressure Level
Range: 1 – 5000  Default: 5
Description: Sets the pressure level to trigger the soft starter to perform a soft start.

33C – Start Response Delay
Range: 00:00:10 – 30:00:00 mm:ss:ms  Default: 00:00:500 ms
Description: Sets a delay between the pressure passing the pressure control start level, and the soft starter performing a soft start.
33D – Stop Pressure Level
Range: 0 – 5000    Default: 10
Description: Sets the pressure level to trigger the soft starter to stop the motor.

33E – Stop Response Delay
Range: 00:00:10 – 30:00:00 mm:ss:ms    Default: 00:00:500 ms
Description: Sets a delay between the pressure passing the pressure control stop level, and the soft starter stopping the motor.

9.22 34 Depth Protection

NOTE
The parameters in this group are only active if a smart card is installed.

Depth protection uses terminals B13, B14 or C13, C14 on the smart card.

34A – Depth Trip Level
Range: 0 – 1000    Default: 5
Description: Sets the trip point for depth protection.

34B – Depth Reset Level
Range: 0 – 1000    Default: 10
Description: Sets the level for the soft starter to auto-reset a depth trip.

34C – Depth Start Delay
Range: 00:00:10 – 30:00:00 mm:ss:ms    Default: 00:00:500 ms
Description: Sets a delay before a depth protection trip can occur. The delay is counted from the time a start signal is received. The depth input is ignored until the start delay has elapsed.

34D – Depth Response Delay
Range: 00:00:10 – 30:00:00 mm:ss:ms    Default: 00:00:500 ms
Description: Sets a delay between the depth passing the depth protection trip level, and the soft starter tripping.

9.23 35 Thermal Protection

NOTE
The parameters in this group are only active if a smart card is installed.

35A – Temperature Sensor Type
Options: None (default)
        PT100
Description: Selects which type of sensor is associated with the temperature sensor input on the smart card.
35B – Temperature Trip Level
Range: 0° – 240°  Default: 40°
Description: Sets the trip point for temperature protection. Use parameter 10B Temperature Scale to configure the temperature scale.

9.24 36 Pump Trip Action
36A – Pressure Sensor
Options: Soft Trip and Log (default)  Trip and Reset
         Soft Trip and Reset  Warn and Log
         Trip Starter  Log Only
Description: Selects the soft starter’s response if it detects a fault with the pressure sensor.

36B – Flow Sensor
Options: Soft Trip and Log (default)  Trip and Reset
         Soft Trip and Reset  Warn and Log
         Trip Starter  Log Only
Description: Selects the soft starter’s response if it detects a fault with the flow sensor.

36C – Depth Sensor
Options: Soft Trip and Log (default)  Trip and Reset
         Soft Trip and Reset  Warn and Log
         Trip Starter  Log Only
Description: Selects the soft starter’s response if it detects a fault with the depth sensor.

36D – High Pressure
Options: Soft Trip and Log (default)  Trip and Reset
         Soft Trip and Reset  Warn and Log
         Trip Starter  Log Only
Description: Selects the soft starter’s response if the pressure exceeds the high pressure trip level (parameter 32A) or the high pressure switch sensor closes.

36E – Low Pressure
Options: Soft Trip and Log (default)  Trip and Reset
         Soft Trip and Reset  Warn and Log
         Trip Starter  Log Only
Description: Selects the soft starter’s response if the pressure falls below the low pressure trip level (parameter 32D) or the low pressure switch sensor closes.
36F – High Flow
Options: Soft Trip and Log (default)  Trip and Reset
         Soft Trip and Reset  Warn and Log
         Trip Starter  Log Only
Description: Selects the soft starter’s response if the flow exceeds the high flow trip level (parameter 31A).

36G – Low Flow
Options: Soft Trip and Log (default)  Trip and Reset
         Soft Trip and Reset  Warn and Log
         Trip Starter  Log Only
Description: Selects the soft starter’s response if the flow falls below the low flow trip level (parameter 31B).

36H – Flow Switch
Options: Soft Trip and Log (default)  Trip and Reset
         Soft Trip and Reset  Warn and Log
         Trip Starter  Log Only
Description: Selects the soft starter’s response if the flow sensor closes (switch type sensors only).

36I – Well Depth
Options: Soft Trip and Log (default)  Trip and Reset
         Soft Trip and Reset  Warn and Log
         Trip Starter  Log Only
Description: Selects the soft starter’s response if the depth falls below the depth trip level (parameter 34A) or the depth switch sensor closes.

36J – RTD/PT100 B
Options: Soft Trip and Log (default)  Trip and Reset
         Soft Trip and Reset  Warn and Log
         Trip Starter  Log Only
Description: Selects the soft starter’s response to the protection event.
10. Application Examples

10.1 Smart Card - Pump Control and Protection

The EMX4i smart card is ideal for applications with extensive external inputs, such as pumping situations where external sensors provide additional protection to the pump and motor.

In this example, the EMX4i controls a bore pump via scheduled start/stop operation. The control panel is fitted with a three-way selector switch allowing Auto Run, Stop or Manual Run. Three 4-20 mA transducers are used to monitor water depth, pipe pressure and flow.
### APPLICATION EXAMPLES

**Parameter settings:**

- Parameter 1A *Command Source*: select 'Smart Card + Clock'.
- Parameters 4A~4X Auto-Start/Stop: Set as required.
- Parameter 7A *Input A Function*: select 'Command Override: Digital'.
- Parameters 30A~30O Pump Input Configuration: Set as required.
- Parameters 31A~31D Flow Protection: Set as required.
- Parameters 32A~32F Pressure Protection: Set as required.
- Parameters 34A~34D Depth Protection: Set as required.
- Parameters 35A~35B Thermal Protection: Set as required.
10.2 Smart Card - Level Controlled Pump Activation

The EMX4i smart card can be used to control start/stop activation of the starter, based on information from external inputs.

In this example, the EMX4i controls a pump which fills a tank, with maximum and minimum water levels. A pressure sensor is used to monitor the level of water in the tank and trigger the pump to fill the tank when water drops below the minimum level, and shut off the pump when the maximum water level is reached.

A three-way selector switch allows the user to override sensor-based control, and manually start or stop the motor.

Parameter settings:

- Parameter 1A Command Source: select 'Smart Card'.
- Parameter 7A Input A Function: select 'Command Override: Digital'.
- Parameters 30A~30O Pump Input Configuration: Set as required.
- Parameters 31A~31D Flow Protection: Set as required.
- Parameters 33A~33E Pressure Control: Set as required.
11. Troubleshooting

11.1 Protection Responses

When a protection condition is detected, the EMX4i will write this to the event log and may also trip or issue a warning. The soft starter's response depends on the Protection Action setting (parameter group 6).

Some protection responses cannot be adjusted by the user. These trips are usually caused by external events (such as phase loss) or by a fault within the soft starter. These trips do not have associated parameters and cannot be set to Warn or Log.

If the EMX4i trips you will need to identify and clear the condition that triggered the trip, then reset the soft starter before restarting. To reset the starter, press the **RESET** button on the keypad or activate the Reset remote input.

If the EMX4i has issued a warning, the soft starter will reset itself once the cause of the warning has been resolved.

11.2 Trip Messages

<table>
<thead>
<tr>
<th>Display</th>
<th>Possible cause/Suggested solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>2 Phase - Damaged SCR</td>
<td>This message is displayed if the soft starter tripped on &quot;Lx-Tx shorted&quot; during the pre-start checks and PowerThrough is enabled. It indicates that the starter now operates in PowerThrough mode (2-phase control only). Check for either a shorted SCR or a short within the bypass contactor. Related parameters: 6S</td>
</tr>
<tr>
<td>Battery/clock</td>
<td>A verification error has occurred on the real time clock, or the backup battery voltage is low. If the battery is low and the power is off, date/time settings will be lost. The EMX4i will continue to soft start and soft stop correctly. Reprogram the date and time. The battery is not removable. In order to replace the battery, the main control PCB must be replaced. Related parameters: 6T</td>
</tr>
<tr>
<td>Bypass overload</td>
<td>This trip is not adjustable. Bypass overload protection protects the soft starter from severe operating overloads while running. The soft starter will trip if it detects overcurrent at 600% of the contactor rating. Related parameters: None</td>

</table>
| Current imbalance   | Current imbalance can be caused by problems with the motor, the environment or the installation, such as:  
  • An imbalance in the incoming mains voltage  
  • A problem with the motor windings  
  • A light load on the motor  
  • A phase loss on input terminals L1, L2 or L3 during Run mode  
  • An SCR that has failed open circuit. A failed SCR can only be definitely diagnosed by replacing the SCR and checking the starter's performance.  
  Related parameters: 5A, 5B, 6C  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

<tr>
<td>Undercurrent</td>
<td>The motor has experienced a sharp drop in current, caused by loss of load. Causes can include broken components (shafts, belts or couplings), or a pump running dry.</td>
</tr>
<tr>
<td></td>
<td>Related parameters: 5C, 5D, 6D</td>
</tr>
<tr>
<td>Underpower</td>
<td>The motor has experienced a sharp drop in power, caused by loss of load. Causes can include broken components (shafts, belts or couplings), or a pump running dry.</td>
</tr>
<tr>
<td></td>
<td>Related parameters: 5K, 5L, 6H</td>
</tr>
<tr>
<td>Undervoltage</td>
<td>Mains voltage has fallen below the level selected. Causes can include an undersized supply or adding a large load to the system.</td>
</tr>
<tr>
<td></td>
<td>Related parameters: 5G, 5H, 6F</td>
</tr>
<tr>
<td>Unsupported option</td>
<td>The selected function is not available (e.g., jog is not supported in inside delta configuration).</td>
</tr>
<tr>
<td></td>
<td>Related parameters: None</td>
</tr>
<tr>
<td>VZC Fail Px</td>
<td>Where 'X' is 1, 2 or 3. Internal fault (PCB fault). Contact your local supplier for advice.</td>

## TROUBLESHOOTING

### Display Possible cause/Suggested solution

**Zero Speed Detect**
- The zero speed input has not closed within the expected duration of a soft stop.
  - Check the zero speed sensor is operating correctly.
  - Check that parameters 2Q Brake Current Limit and 5O Excess Start Time are appropriate for the application.
- Related parameters: 2Q, 3S, 5O

### 11.3 General Faults

This table describes situations where the soft starter does not operate as expected but does not trip or give a warning.

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Probable Cause</th>
</tr>
</thead>
<tbody>
<tr>
<td>Starter &quot;Not Ready&quot;</td>
<td>• The reset input may be active. If the reset input is active, the starter will not operate.</td>
</tr>
<tr>
<td>&quot;Simul&quot; on display</td>
<td>• The starter is running simulation software. This software is intended for demonstration purposes only and is not suitable for controlling a motor. Contact your local supplier for advice.</td>
</tr>
<tr>
<td>The soft starter does not respond to the <strong>START</strong> or <strong>RESET</strong> button on the keypad.</td>
<td>• The soft starter will only accept commands from the keypad if parameter 1A Command Source is set to Remote Keypad. Check that the Local LED on the starter is on.</td>
</tr>
</tbody>
</table>
| The soft starter does not respond to commands from the control inputs. | • The soft starter will only accept commands from the inputs if parameter 1A Command Source is set to Digital Input. Check the setting of 1A.  
  • The control wiring may be incorrect. Check that the remote start, stop and reset inputs are configured correctly (refer to Start/Stop on page 26 for details).  
  • The signals to the remote inputs may be incorrect. Test the signalling by activating each input signal in turn. |
<table>
<thead>
<tr>
<th>Symptom</th>
<th>Probable Cause</th>
</tr>
</thead>
</table>
| The soft starter does not respond to a start command from either the keypad or the digital inputs. | - The soft starter may be waiting for the restart delay to elapse. The length of the restart delay is controlled by parameter 5P Restart Delay.  
- The motor may be too hot to permit a start. The soft starter will only permit a start when it calculates that the motor has sufficient thermal capacity to complete the start successfully. Wait for the motor to cool before attempting another start.  
- The reset input may be active. If the reset input is active, the starter will not operate.  
- The soft starter may be waiting for control signals via the communications network (parameter 1A Command Source = Network).  
- The EMX4i may be waiting for a scheduled auto-start (parameter 1A Command Source = Clock). |
| Erratic and noisy motor operation. | - If the soft starter is connected to the motor using inside delta configuration, the soft starter may not be correctly detecting the connection. Contact your local supplier for advice. |
| Remote keypad shows message "awaiting data" | The keypad is not receiving data from the control PCB. Check the cable connection. |
| The soft starter does not control the motor correctly during starting. | - Start performance may be unstable when using a low Motor Full Load Current setting (parameter 1B).  
- Power factor correction (PFC) capacitors must be installed on the supply side of the soft starter and must be disconnected during starting and stopping. To use the EMX4i to control power factor correction, connect the PFC contactor to a programmable relay set to Run.  
- High levels of harmonics on the mains supply can affect soft starter performance. If variable speed drives are installed nearby, check they are properly grounded and filtered. |
| Motor does not reach full speed. | - If the start current is too low, the motor will not produce enough torque to accelerate to full speed. The soft starter may trip on excess start time. |

**NOTE**  
Make sure the motor starting parameters are appropriate for the application and that you are using the intended motor starting profile. If a programmable input is set to Motor Set Select, check that the corresponding input is in the expected state.  
- The load may be jammed. Check the load for severe overloading or a locked rotor situation.
<table>
<thead>
<tr>
<th>Symptom</th>
<th>Probable Cause</th>
</tr>
</thead>
</table>
| Soft stop ends too quickly. | • The soft stop settings may not be appropriate for the motor and load. Review the soft stop settings.  
• If the motor is very lightly loaded, soft stop will have limited effect. |
| After selecting Adaptive Control the motor used an ordinary start and/or the second start was different to the first. | • The first Adaptive Control start is actually ‘Constant Current’ so that the starter can learn from the motor characteristics. Subsequent starts use Adaptive Control. |
| PowerThrough does not operate when selected. | • The starter will trip on Lx-Tx Shorted on the first start attempt after control power is applied. PowerThrough will not operate if control power is cycled between starts. |
| Parameter settings cannot be stored. | • Make sure you are saving the new value by pressing the **STORE** button after adjusting a parameter setting. If you press **EXIT**, the change will not be saved. The EMX4i does not display a confirmation.  
• Check that the adjustment lock (parameter 10G) is set to Read & Write. If the adjustment lock is set to Read Only, settings can be viewed but not changed. |
| USB Full | • The USB drive may not have enough free space available for the selected function.  
• The file system on the USB drive may not be compatible with the soft starter. The EMX4i supports FAT32 file systems. The EMX4i’s USB functions are not compatible with NTFS file systems. |
| USB Missing | A USB function has been selected in the menu, but the product cannot detect a USB drive. Check that the USB drive has been inserted in the port. |
| File Missing | A USB function has been selected in the menu, but the required file cannot be found. Save/Load Master Parameters uses a file called Master_Parameters.par, at the top level of the USB drive. For these functions to work correctly, do not move or rename this file. |
| File Not Valid | A USB function has been selected in the menu, but the file is not valid. |
| File Empty | A USB function has been selected in the menu and the file has been found, but does not contain the expected content. |
| Rating Not Valid | The value selected for parameter 20D **Model Rating** does not match the soft starter. Set parameter 20D to match the rating shown on the EMX4i nameplate label (on the side of the unit). |
