## Press Release

### Benshaw Introduces New Line of Washdown Drives

Pittsburgh, PA, May 13, 2021 — Benshaw Inc. is pleased to introduce a new family of washdown drives designed and built to provide optimum performance in harsh, high pressure washdown environments.

**Benshaw SW Series Washdown Drives** are rated for heavy duty industrial applications ranging from 0.5 – 30HP. All SW Series drives feature a rugged UL Type 4X (IP66) indoor rated polycarbonate enclosure that exceeds NEMA 1, 12, 4 and 4X standards. In addition, all drives in the SW Series include a convenient built-in power disconnect switch, software that provides the flexibility to program your SW Series drive for V/Hz, sensorless vector or slip compensation operation, an on-board RJ45 port (Modbus-RTU), an EMC filter (480V models) and a four digit/seven segment display.

An optional remote keypad is also available, making SW Series Washdown Drives even easier to control. The SW Series' compact size makes it ideal for either stand-alone or side-by-side installation.

Benshaw SW Series Washdown Drives are stocked and available to order through the company's ecommerce platform ([BenshawExpress.com](http://BenshawExpress.com)).

Watch for other new product announcements coming soon.
